Recommended Operating Conditions

Ambient Operating Range (T_A)		-55°C to +125°C
Input Voltage Range		6.0V to 16V

Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Oscillator frequency	f _{OSC}	V _{IN} =0V, both inputs	1,2,3	All	130	190	kHz

NOTE 1: Line regulation and load regulation are inherently tested by input voltage and load current performed under the conditions and limits of the output voltage tests.

NOTE 2: The standby current typically settles to 25μA, (-55°C to +125°C), within 2 seconds; however to decrease test time, part is guaranteed at 100μA maximum value.
