

USB driver Install Procedure for the “M-DrAGON”

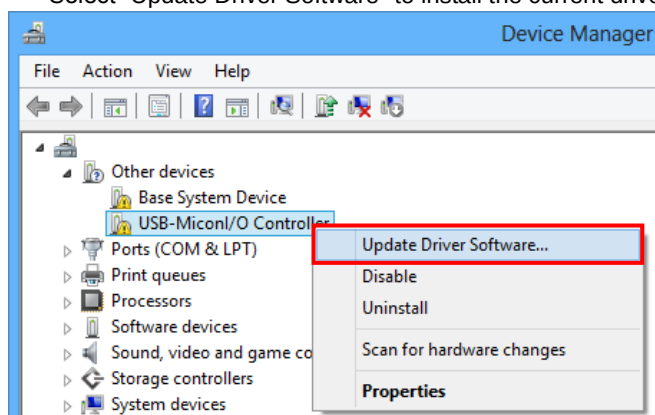

Attach USB cable to the Daughter board prior this installation.

Install the USB driver per the following procedure after connecting USB cable to Daughter Board.

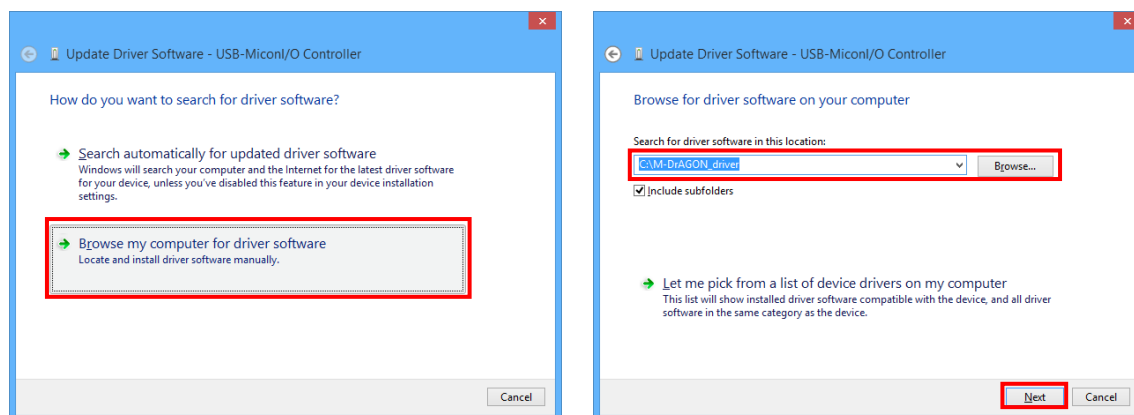

This manual refers to an installation on Windows 8 (x86).

This layout and procedure may vary with other Operating System versions.

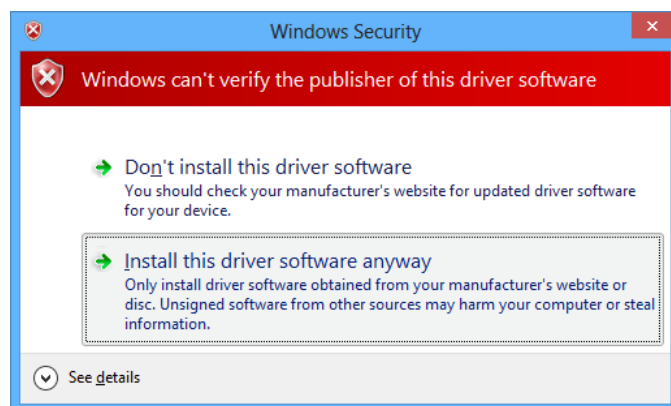

- 1) Let the Device Manager start up. Right click the driver, “USB-MiconI/O Controller”.
Select “Update Driver Software” to install the current driver.

- 2) After selecting “Browse my computer for driver software”, the window to set the driver location will appear.
Push Browser button and set the location. Browse for “M-DrAGON_driver.inf”.
Push the “Next” button to continue to the next step.

- 3) When “Windows security” appears, please select “Install this driver software anyway” to execute install.

4) When the driver is update is complete, the final window appears.

Let Device Manager start up again to confirm the driver name has been updated to "M-DrAGON I/O Controller".

If not the procedure will need to be run again.
