

Trench gate field-stop IGBT, HB series 650 V, 40 A high speed

Datasheet - production data

Figure 1: Internal schematic diagram

Features

- Maximum junction temperature: $T_J = 175\text{ }^{\circ}\text{C}$
- High speed switching series
- Minimized tail current
- Very low saturation voltage: $V_{CE(sat)} = 1.6\text{ V}$ (typ) @ $I_C = 40\text{ A}$
- Safe paralleling
- Tight parameter distribution
- Low thermal resistance

Applications

- Photovoltaic inverters
- High frequency converters

Description

These devices are IGBTs developed using an advanced proprietary trench gate field-stop structure. These devices are part of the new HB series of IGBTs, which represent an optimum compromise between conduction and switching loss to maximize the efficiency of any frequency converter. Furthermore, the slightly positive $V_{CE(sat)}$ temperature coefficient and very tight parameter distribution result in safer paralleling operation.
