

### 2.5V/3.3V, 3.0GHz CML AnyGate® Any Logic with 50Ω Outputs

#### Features

- Guaranteed AC Parameters Over Temperature:
  - $f_{MAX} > 3.0\text{GHz}$
  - $t_r / t_f < 100\text{ps}$
  - Propagation delay  $< 280\text{ps}$
- Guaranteed Operation Over  $-40^\circ$  to  $+85^\circ\text{C}$  Temperature Range
- Wide Supply Voltage Range: 2.3V to 3.6V
- Single IC Provides 8 Logic Functions
- 2:1 MUX Capability
- Fully Differential I/O
- Source Terminated CML Outputs for Fast edge Rates (50Ω Load)
- Guaranteed Matched Propagation Delays:
  - Select (S)-to-out:  $< 280\text{ps}$
  - Input (A and B)-to-out:  $< 280\text{ps}$
- Accepts LVPECL and CML Input Signals
- Functions as LVPECL-to-CML Translator
- Available in a 10-pin (3mm x 3mm) MSOP Package

#### Applications

- Port bypass
- Data communication systems
- Wireless communication systems
- Telecom systems

#### General Description

The SY55851A is a highly flexible, universal logic gate capable of up to 3.0GHz operation. This AnyGate differential logic device will produce all possible logic functions of two Boolean variables. It can be configured as any of the following gates: AND, NAND, OR, NOR, XOR, XNOR, DELAY, NEGATION (NOT). The SY55851A can also function as a 2-input multiplexer.

The SY55851A has an output stage optimized for 50Ω loads.

### 1.0 ELECTRICAL CHARACTERISTICS

#### Absolute Maximum Ratings †

Supply Voltage,  $V_{CC}$ ..... -0.5V to +6.0V

Input Voltage,  $V_{IN}$ ..... -0.5V to  $V_{CC} + 0.5V$

CML Output Voltage,  $V_{OUT}$ .....  $V_{CC} - 1.0$  to  $V_{CC} + 0.5V$

† **Notice:** Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum ratings conditions for extended periods may affect device reliability.

**TABLE 1-1: DC CHARACTERISTICS**

| <b>Electrical Characteristics:</b> $V_{CC} = 2.3V$ to $3.6V$ ; $GND = 0V$ ; $T_A = -40^{\circ}C$ to $+85^{\circ}C$ unless otherwise stated ( <a href="#">Note 1</a> ) |           |                  |                  |                  |          |            |

## 2.0 FUNCTIONAL DESCRIPTION

### 2.1 Establishing Static Logic Inputs

The true pin of an input pair is internally biased to ground through a 75kΩ resistor. The complement pin of an input pair is internally biased to  $V_{CC}/2$  through an internal voltage divider consisting of two 75kΩ resistors. Since some logic functions necessitate an output to be connected to two inputs, SY55851A inputs have no internal terminations. For typical terminations see [Section 5.0, Input Interface Applications](#).

To keep an input at static logic zero at  $V_{CC} \geq 3.0V$ , leave both inputs unconnected or tie the complement input to  $V_{CC}$ . For  $V_{CC} < 3.0V$  applications, connect the complement input to  $V_{CC}$  and leave the true input unconnected. These are the only safe ways to cause inputs to be at a static value. In particular, no input pin should be directly connected to ground. All NC (No Connect) pins should be unconnected.

**FIGURE 2-1:** Hard Wiring a Logic "1" (1)

**Note 1:** Input is either A, B, S input, and /Input is either /A, /B, /S input.

**FIGURE 2-2:** Hard Wiring a Logic "0" (1)

### 4.0 PIN DESCRIPTIONS

The descriptions of the pins are listed in [Table 4-1](#).

**TABLE 4-1: PIN FUNCTION TABLE**

| Pin Number | Symbol | Description                                                                                                                                                                                                                                                                                                        |
|------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1, 2       | S, /S  | CML, LVPECL, LVTTTL Input Selector: This is one of the differential inputs to the logic block. It represents either one Boolean input for a 2-variable logic function, or the select input for a 2-input MUX. See <a href="#">Section 5.0, Input Interface Applications</a> .                                      |
| 3, 4       | A, /A  | CML, LVPECL Input: This is one of the differential inputs to the logic block. For a 2-variable logic function, it is either a constant value or a Boolean input. For a 2-input MUX, this signal represents the output when S is set to logic zero. See <a href="#">Section 5.0, Input Interface Applications</a> . |
| 5          | GND    | Negative Supply Voltage                                                                                                                                                                                                                                                                                            |
| 6, 7       | /Q, Q  | Differential CML Output: This is the differential CML output for the logic block. See <a href="#">Section 6.0, CML Output Termination</a> .                                                                                                                                                                        |
| 8, 9       | B, /B  | CML, LVPECL Input: This is one of the differential inputs to the logic block. For a 2-variable logic function, it is either a constant value or a Boolean input. For a 2-input MUX, this signal represents the output when S is set to logic one. See <a href="#">Section 5.0, Input Interface Applications</a> .  |
| 10         | VCC    | Positive Supply Voltage                                                                                                                                                                                                                                                                                            |

# SUPERLITE™

## SY55851A

### 5.0 INPUT INTERFACE APPLICATIONS

All inputs to the SY55851A must be externally terminated. All inputs accept the output from any other member of this family.

**FIGURE 5-1:** CML-DC Coupled.

**FIGURE 5-2:** LVPECL-DC Coupled (1)

**Note 1:**  $V_{CC}$  (Driver) and  $V_{CC} \geq 3V$

### 6.0 CML OUTPUT TERMINATION

All outputs are source terminated  $50\Omega$  CML differential drivers as shown in Figure 6-1 below.

**FIGURE 6-1:** Differentially Terminated ( $50\Omega$  Load CML Output).

**FIGURE 6-2:** Interfacing TTL-to-CML Select Inputs.

## 7.0 PACKAGING INFORMATION

### 7.1 Package Marking Information

10-Lead MSOP

Example

|                |         |                                                                                                                  |
|----------------|---------|------------------------------------------------------------------------------------------------------------------|
| <b>Legend:</b> | XX...X  | Product code or customer-specific information                                                                    |
|                | Y       | Year code (last digit of calendar year)                                                                          |
|                | YY      | Year code (last 2 digits of calendar year)                                                                       |
|                | WW      | Week code (week of January 1 is week '01')                                                                       |
|                | NNN     | Alphanumeric traceability code                                                                                   |
|                | (e3)    | Pb-free JEDEC® designator for Matte Tin (Sn)                                                                     |
|                | *       | This package is Pb-free. The Pb-free JEDEC designator (e3) can be found on the outer packaging for this package. |
|                | •, ▲, ▼ | Pin one index is identified by a dot, delta up, or delta down (triangle mark).                                   |

**Note:** In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information. Package may or may not include the corporate logo.

Underbar (¯) and/or Overbar (¯) symbol may not be to scale.

## **SY55851A**

---

**NOTES:**

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

*Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.*
