

Quad high-side smart power solid-state relay

Datasheet - production data

- Open drain diagnostic outputs
- 3.3 V CMOS/TTL compatible inputs
- Fast demagnetization of inductive loads
- Conforms to IEC 61131-2
- ESD according to IEC 61000-4-2 up to +/- 25 kV

Features

Type	$V_{\text{demag}}^{(1)}$	$R_{\text{DS(on)}}^{(1)}$	$I_{\text{out}}^{(1)}$	V_{CC}
VNI4140K	$V_{\text{CC}}-41 \text{ V}$	0.08Ω	0.7 A	41 V

1. Per channel.

- Output current: 0.7 A per channel
- Shorted load protections
- Junction overtemperature protection
- Case overtemperature protection for thermal independence of the channels
- Thermal case shutdown restart not simultaneous for the various channels
- Protection against loss of ground
- Current limitation
- Undervoltage shutdown

Description

The VNI4140K is a monolithic device made using STMicroelectronics VIPower technology, intended to drive four independent resistive or inductive loads with one side connected to ground. Active current limitation avoids dropping the system power supply in case of shorted load. Built-in thermal shutdown protects the chip from overtemperature and short-circuit. In overload conditions, channel turns OFF and back ON automatically so to maintain junction temperature between T_{TSD} and T_{R} . If this condition makes case temperature reach T_{CSD} , overloaded channel is turned OFF and restart only when case temperature has decreased down to T_{CR} . In case of more than one channel in overload, restart of the overloaded channels is not simultaneous, in order to avoid high peak current from the supply. Non-overloaded channels continue operating normally. The open drain diagnostics outputs indicate overtemperature conditions.

Figure 12. VNI4140K thermal impedance junction ambient single pulse
(one channel on)

9 Reverse polarity protection

Reverse polarity protection can be implemented on board using two different solutions:

1. Placing a resistor (R_{GND}) between IC GND pin and load GND
2. Placing a diode between IC GND pin and load GND

If option 1 is selected, the minimum resistance value has to be selected according to the following equation:

Equation 1

$$R_{GND} \geq V_{CC}/I_{GND}$$

where I_{GND} is the DC reverse ground pin current and can be found in [Section 2: Maximum ratings](#) of this datasheet.

Power dissipated by R_{GND} (when $V_{CC} < 0$: during reverse polarity situations) is:

Equation 2

$$PD = (V_{CC})^2/R_{GND}$$

If option 2 is selected, the diode has to be chosen by taking into account $V_{RRM} > |V_{CC}|$ and its power dissipation capability:

Equation 3

$$P_D \geq I_S \cdot V_f$$

Note: In normal conditions (no reverse polarity) due to the diode, there is a voltage drop between GND of the device and GND of the system.

Figure 13. Reverse polarity protection

This schematic can be used with any type of load.

10 Demagnetization energy

13 Revision history

Table 14. Document revision history

Date	Revision	Changes
16-Nov-2007	1	Initial release.
26-Nov-2007	2	Updated electrical parameters values.
08-Jul-2008	3	Inserted: Figure 4 on page 9 and Section 9: Reverse polarity protection on page 16 .
08-Apr-2008	4	Added I_{LGND} parameter in Table 4 on page 6 .
27-Aug-2009	5	Updated Section 9: Reverse polarity protection .
09-Dec-2009	6	Added Section 10: Conformity to IEC 61000-4-2 ESD immunity test .
15-Apr-2010	7	Updated Table 5 on page 6 .
06-Feb-2012	8	Inserted feature: conformity to IEC 61000-4-2 ESD immunity test in cover page. Removed chapter: conformity to IEC 61000-4-2 ESD immunity test.
05-Mar-2012	9	Suggested footprint inserted. In Table 4 parameter I_{LGND} has been added.
19-Mar-2012	10	Minor text changes.
20-Dec-2012	11	Operating temperature range extended.
06-Nov-2013	12	Updated E_{AS} value in Table 2: Absolute maximum ratings . Added Figure 14 .
11-Dec-2013	13	Updated Section 9 .
