www.onsemi.com

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild_questions@onsemi.com.

74LVX4245

8-Bit Dual Supply Translating Transceiver with 3-STATE Outputs

General Description

The LVX4245 is a dual-supply, 8-bit translating transceiver that is designed to interface between a 5V bus and a 3V bus in a mixed 3V/5V supply environment. The Transmit/Receive ($\overline{T/R}$) input determines the direction of data flow. Transmit (active-HIGH) enables data from A Ports to B Ports; Receive (active-LOW) enables data from B Ports to A Ports. The Output Enable input, when HIGH, disables both A and B Ports by placing them in a high impedance condition. The A Port interfaces with the 5V bus; the B Port interfaces with the 3V bus.

The LVX4245 is suitable for mixed voltage applications such as laptop computers using 3.3V CPU's and 5V LCD displays.

Features

- Bidirectional interface between 5V and 3V buses
- Control inputs compatible with TTL level
- 5V data flow at A Port and 3V data flow at B Port
- Outputs source/sink 24 mA at 5V bus; 12 mA at 3V bus
- Guaranteed simultaneous switching noise level and dynamic threshold performance
- Implements patented EMI reduction circuitry
- Functionally compatible with the 74 series 245

Ordering Code:

Order Number	Package Number	Package Description
74LVX4245WM	M24B	24-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-013, 0.300" Wide
74LVX4245QSC	MQA24	24-Lead Quarter Size Outline Package (QSOP), JEDEC MO-137, 0.150" Wide
74LVX4245MTC	MTC24	24-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 4.4mm Wide

Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

Logic Diagram

Absolute Maximum Ratings(Note 1)

Supply Voltage (V_{CCA}, V_{CCB})	-0.5V to +7.0V
DC Input Voltage (V_I) @ $\overline{OE}$, $T/\overline{R}$	-0.5V to $V_{CCA} + 0.5V$
DC Input/Output Voltage (V_{IO})	
@ A_n	-0.5V to $V_{CCA} + 0.5V$
@ B_n	-0.5V to $V_{CCB} + 0.5V$
DC Input Diode Current (I_{IN})	
@ $\overline{OE}$, $T/\overline{R}$	± 20 mA
DC Output Diode Current (I_{OK})	± 50 mA
DC Output Source or Sink Current (I_O)	± 50 mA
DC V_{CC} or Ground Current per Output Pin (I_{CC} or I_{GND}) and Max Current @ I_{CCA}	± 50 mA
@ I_{CCB}	± 200 mA
Storage Temperature Range (T_{STG})	-65°C to $+150^\circ\text{C}$
DC Latch-Up Source or Sink Current	± 300 mA

Recommended Operating Conditions (Note 2)

Supply Voltage	4.5V to 5.5V
V_{CCA}	2.7V to 3.6V
V_{CCB}	0V to V_{CCA}
Input Voltage (V_I) @ $\overline{OE}$, $T/\overline{R}$	0V to V_{CCA}
Input/Output Voltage (V_{IO})	
@ A_n	0V to V_{CCA}
@ B_n	0V to V_{CCB}
Free Air Operating Temperature (T_A)	-40°C to $+85^\circ\text{C}$
Minimum Input Edge Rate ($\Delta t/\Delta V$)	8 ns/V
V_{IN} from 30% to 70% of V_{CC}	
V_{CC} @ 3.0V, 4.5V, 5.5V	

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 2: Unused inputs must be held HIGH or LOW. They may not float.

DC Electrical Characteristics

t _{PHZ} t _{PLZ}	Output Disable Time OE to A	1.0 1.0	3.9 2.9	7.0 6.5	1.0 1.0	7.5 7.0	1.0 1.0	7.5 7.5	ns
t _{OSHL} t _{OSLH}	Output to Output Skew (Note 9) Data to Output		1.0	1.5		1.5		1.5	ns

Note 7: Voltage Range 5.0V is 5.0V ± 0.5V.

Note 8: Voltage Range 3.3V is 3.3V ± 0.3V.

Note 9: Skew is defined as the absolute value of the difference between the actual propagation delay for any two separate outputs of the same device. The specification applies to any outputs switching in the same direction, either HIGH-to-LOW (t_{OSHL}) or LOW-to-HIGH (t_{OSLH}). Parameter guaranteed by design.

Capacitance

Symbol	Parameter	Typ	Units	Conditions
C_{IN}	Input Capacitance	4.5	pF	$V_{CC} = \text{Open}$
$C_{I/O}$	Input/Output Capacitance	15	pF	$V_{CCA} = 5.0V$ $V_{CCB} = 3.3V$
C_{PD}	Power Dissipation Capacitance (Note 10)	B→A	55	pF
		A→B	40	pF
				$V_{CCA} = 5.0V$ $V_{CCB} = 3.3V$

Note 10: C_{PD} is measured at 10 MHz

8-Bit Dual Supply Translating Transceiver

The LVX4245 is a dual supply device capable of bidirectional signal translation. This level shifting ability provides an efficient interface between low voltage CPU local bus with memory and a standard bus defined by 5V I/O levels. The device control inputs can be controlled by either the low voltage CPU and core logic or a bus arbitrator with 5V I/O levels.

Manufactured on a sub-micron CMOS process, the LVX4245 is ideal for mixed voltage applications such as notebook computers using 3.3V CPU's and 5V peripheral devices.

Power Up Considerations

To insure the system does not experience unnecessary I_{CC} current draw, bus contention, or oscillations during power up, the following guidelines should be adhered to (refer to Table 1):

- Power up the control side of the device first. This is the V_{CCA} .
- $\overline{OE}$ should ramp with or ahead of V_{CCA} . This will help guard against bus contention.
- The Transmit/Receive control pin ($T/\overline{R}$) should ramp with or ahead of V_{CCA} , this will ensure that the A Port data

pins are configured as inputs. With V_{CCA} receiving power first, the A I/O Port should be configured as inputs to help guard against bus contention and oscillations.

- A side data inputs should be driven to a valid logic level. This will prevent excessive current draw.

The above steps will ensure that no bus contention or oscillations, and therefore no excessive current draw occurs during the power up cycling of these devices. These steps will help prevent possible damage to the translator devices and potential damage to other system components.

TABLE 1. Low Voltage Translator Power Up Sequencing Table

Device Type	V_{CCA}	V_{CCB}	$T/\overline{R}$	$\overline{OE}$	A Side I/O	B Side I/O	Floatable Pin Allowed
74LVX4245	5V (power up 1st)	3V (power up 2nd)	ramp with V_{CCA}	ramp with V_{CCA}	logic 0V or V_{CCA}	outputs	No

Please reference Application Note AN-5001 for more detailed information on using Fairchild's LVX Low Voltage Dual Supply CMOS Translating Transceivers.

Applications: Mixed Mode Dual Supply Interface Solution

LVX4245 is designed to solve 3V/5V interfacing issues when CMOS devices cannot tolerate I/O levels above their applied V_{CC} . If an I/O pin of 3V ICs is driven by 5V ICs, the P-Channel transistor in 3V ICs will conduct causing current flow from I/O bus to the 3V power supply. The resulting high current flow can cause destruction of 3V ICs through latchup effects. To prevent this problem, a current limiting resistor is used typically under direct connection of 3V ICs and 5V ICs, but it causes speed degradation.

In a better solution, the LVX4245 configures two different output levels to handle the dual supply interface issues. The "A" port is a dedicated 5V port to interface 5V ICs. The "B" port is a dedicated port to interface 3V ICs. *Figure 2* shows how LVX4245 fits into a system with 3V subsystem and 5V subsystem.

This device is also configured as an 8-bit 245 transceiver, giving the designer 3-STATE capabilities and the ability to select either bidirectional or unidirectional modes. Since the center 20 pins are also pin compatible to 74 series 245, as shown in *Figure 1*, the designer could use this device in

either a 3V system or a 5V system without any further work to re-layout the board.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
 2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
