## 8-BIT HIGH-SPEED ANALOG-TO-DIGITAL CONVERTERS

SLAS095L – SEPTEMBER 1994 – REVISED JUNE 2003

### features

- **Analog Input Range**
  - TLC5510 . . . 2 V Full Scale
  - TLC5510A . . . 4 V Full Scale
- **8-Bit Resolution**
- **Integral Linearity Error**
  - $\pm 0.75$  LSB Max (25°C)
  - $\pm 1$  LSB Max (–20°C to 75°C)
- **Differential Linearity Error**
  - $\pm 0.5$  LSB Max (25°C)
  - $\pm 0.75$  LSB Max (–20°C to 75°C)
- **Maximum Conversion Rate**
  - 20 Mega-Samples per Second (MSPS) Max

- **5-V Single-Supply Operation**
- **Low Power Consumption**
  - TLC5510 . . . 127.5 mW Typ
  - TLC5510A . . . 150 mW Typ
  - (includes reference resistor dissipation)
- **TLC5510 is Interchangeable With Sony CXD1175**

### applications

- Digital TV
- Medical Imaging
- Video Conferencing
- High-Speed Data Conversion
- QAM Demodulators

### description

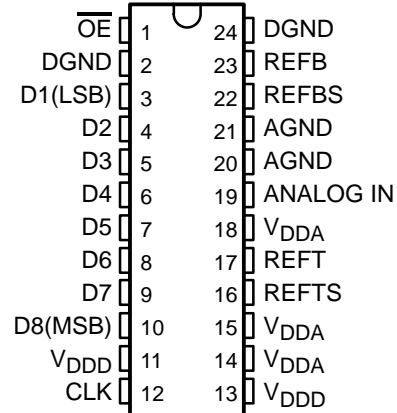

The TLC5510 and TLC5510A are CMOS, 8-bit, 20 MSPS analog-to-digital converters (ADCs) that utilize a semiflash architecture. The TLC5510 and TLC5510A operate with a single 5-V supply and typically consume only 130 mW of power. Included is an internal sample-and-hold circuit, parallel outputs with high-impedance mode, and internal reference resistors.

The semiflash architecture reduces power consumption and die size compared to flash converters. By implementing the conversion in a 2-step process, the number of comparators is significantly reduced. The latency of the data output valid is 2.5 clocks.

The TLC5510 uses the three internal reference resistors to create a standard, 2-V, full-scale conversion range using  $V_{DDA}$ . Only external jumpers are required to implement this option and eliminates the need for external reference resistors. The TLC5510A uses only the center internal resistor section with an externally applied 4-V reference such that a 4-V input signal can be used. Differential linearity is 0.5 LSB at 25°C and a maximum of 0.75 LSB over the full operating temperature range. Typical dynamic specifications include a differential gain of 1% and differential phase of 0.7 degrees.

The TLC5510 and TLC5510A are characterized for operation from –20°C to 75°C.

PW OR NS PACKAGE†  
(TOP VIEW)

† Available in tape and reel only and ordered as the shown in the Available Options table below.

### AVAILABLE OPTIONS

T <sub>A</sub>	PACKAGE		MAXIMUM FULL-SCALE INPUT VOLTAGE
	TSSOP (PW)	SOP (NS) (TAPE AND REEL ONLY)	
–20°C to 75°C	TLC5510IPW	TLC5510INSLE	2 V
	–	TLC5510AINSLE	4 V

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

## 8-BIT HIGH-SPEED ANALOG-TO-DIGITAL CONVERTERS

SLAS095L – SEPTEMBER 1994 – REVISED JUNE 2003

### Terminal Functions

TERMINAL NAME	NO.	I/O	DESCRIPTION
AGND	20, 21		Analog ground
ANALOG IN	19	I	Analog input
CLK	12	I	Clock input
DGND	2, 24		Digital ground
D1–D8	3–10	O	Digital data out. D1 = LSB, D8 = MSB
$\overline{OE}$	1	I	Output enable. When $\overline{OE}$ = low, data is enabled. When $\overline{OE}$ = high, D1–D8 is in high-impedance state.
$V_{DDA}$	14, 15, 18		Analog supply voltage
$V_{DDD}$	11, 13		Digital supply voltage
REFB	23	I	Reference voltage in bottom
REFBS	22		Reference voltage in bottom. When using the TLC5510 internal voltage divider to generate a nominal 2-V reference, REFBS is shorted to REFB (see Figure 3). When using the TLC5510A, REFBS is connected to ground.
REFT	17	I	Reference voltage in top
REFTS	16		Reference voltage in top. When using the TLC5510 internal voltage divider to generate a nominal 2-V reference, REFTS is shorted to REFT (see Figure 3). When using the TLC5510A, REFTS is connected to $V_{DDA}$ .

### absolute maximum ratings†

Supply voltage, $V_{DDA}$ , $V_{DDD}$	7 V
Reference voltage input range, $V_{REFT}$ , $V_{REFB}$	AGND to $V_{DDA}$
Analog input voltage range, $V_{I(ANLG)}$	AGND to $V_{DDA}$
Digital input voltage range, $V_{I(DGTL)}$	DGND to $V_{DDD}$
Digital output voltage range, $V_{O(DGTL)}$	DGND to $V_{DDD}$
Operating free-air temperature range, $T_A$	–20°C to 75°C
Storage temperature range, $T_{stg}$	–55°C to 150°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### recommended operating conditions

		MIN	NOM	MAX	UNIT
Supply voltage	$V_{DDA}$ –AGND	4.75	5	5.25	V
	$V_{DDD}$ –AGND	4.75	5	5.25	
	AGND–DGND	–100	0	100	mV
Reference input voltage (top), $V_{ref(T)}^{\ddagger}$	TLC5510A	$V_{REFB}+2$		4	V
Reference input voltage (bottom), $V_{ref(B)}^{\ddagger}$	TLC5510A	0		$V_{REFT}-4$	V
Analog input voltage range, $V_{I(ANLG)}$		$V_{REFB}$		$V_{REFT}$	V
High-level input voltage, $V_{IH}$		4			V
Low-level input voltage, $V_{IL}$				1	V
Pulse duration, clock high, $t_{W(H)}$ (see Figure 1)		25			ns
Pulse duration, clock low, $t_{W(L)}$ (see Figure 1)		25			ns

‡ The reference voltage levels for the TLC5510 are derived through an internal resistor divider between  $V_{DDA}$  and ground and therefore are not derived from a separate external voltage source (see the electrical characteristics and text). For the 4 V input range of the TLC5510A, the reference voltage is externally applied across the center divider resistor.

## 8-BIT HIGH-SPEED ANALOG-TO-DIGITAL CONVERTERS

SLAS095L – SEPTEMBER 1994 – REVISED JUNE 2003

### PRINCIPLES OF OPERATION

#### functional description

The TLC5510 and TLC5510A are semiflash ADCs featuring two lower comparator blocks of four bits each.

As shown in Figure 2, input voltage  $V_I(1)$  is sampled with the falling edge of CLK1 to the upper comparators block and the lower comparators block(A), S(1). The upper comparators block finalizes the upper data UD(1) with the rising edge of CLK2, and simultaneously, the lower reference voltage generates the voltage RV(1) corresponding to the upper data. The lower comparators block (A) finalizes the lower data LD(1) with the rising edge of CLK3. UD(1) and LD(1) are combined and output as OUT(1) with the rising edge of CLK4. As shown in Figure 2, the output data is delayed 2.5 clocks from the analog input voltage sampling point.

Input voltage  $V_I(2)$  is sampled with the falling edge of CLK2. UD(2) is finalized with the rising edge of CLK3, and LD(2) is finalized with the rising edge of CLK4 at the lower comparators block(B). OUT(2) data appears with the rising edge of CLK5.

Figure 2. Internal Functional Timing Diagram

### PRINCIPLES OF OPERATION

#### internal referencing

##### TLC5510

The three internal resistors shown with  $V_{DDA}$  can generate a 2-V reference voltage. These resistors are brought out on  $V_{DDA}$ , REFTS, REFT, REFB, REFBS, and AGND.

To use the internally generated reference voltage, terminal connections should be made as shown in Figure 3. This connection provides the standard video 2-V reference for the nominal digital output.

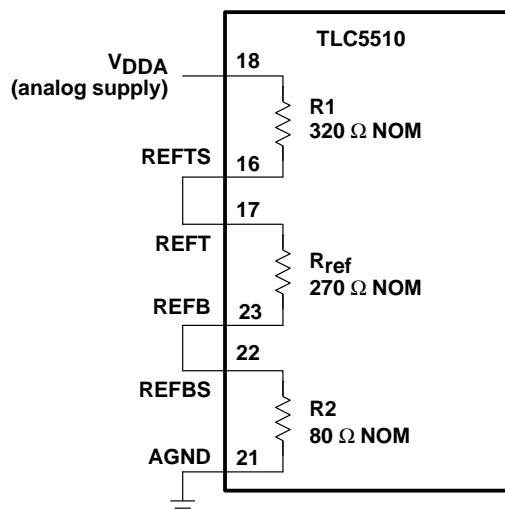

Figure 3. External Connections for a 2-V Analog Input Span Using the Internal-Reference Resistor Divider

##### TLC5510A

For an analog input span of 4 V, 4 V is supplied to REFT, and REFB is grounded and terminal connections should be made as shown in Figure 4. This connection provides the 4-V reference for the nominal zero to full-scale digital output with a 4  $V_{pp}$  analog input at ANALOG IN.

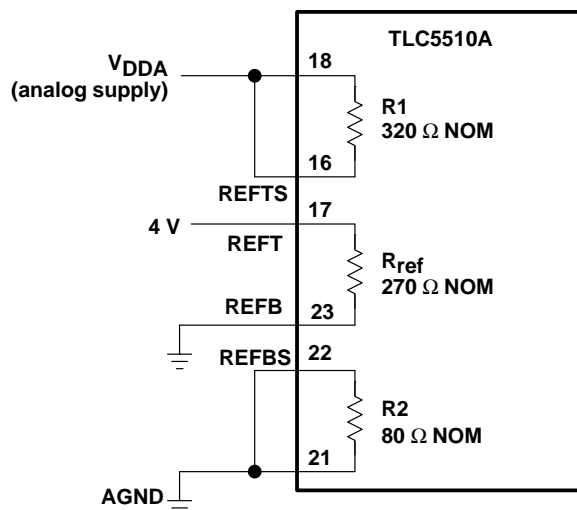

Figure 4. External Connections for 4-V Analog Input Span

•	•	•	•	•	•	•	•	•	•
$V_{ref(T)}$	0	1	1	1	1	1	1	1	1

### APPLICATION INFORMATION

The following notes are design recommendations that should be used with the device.

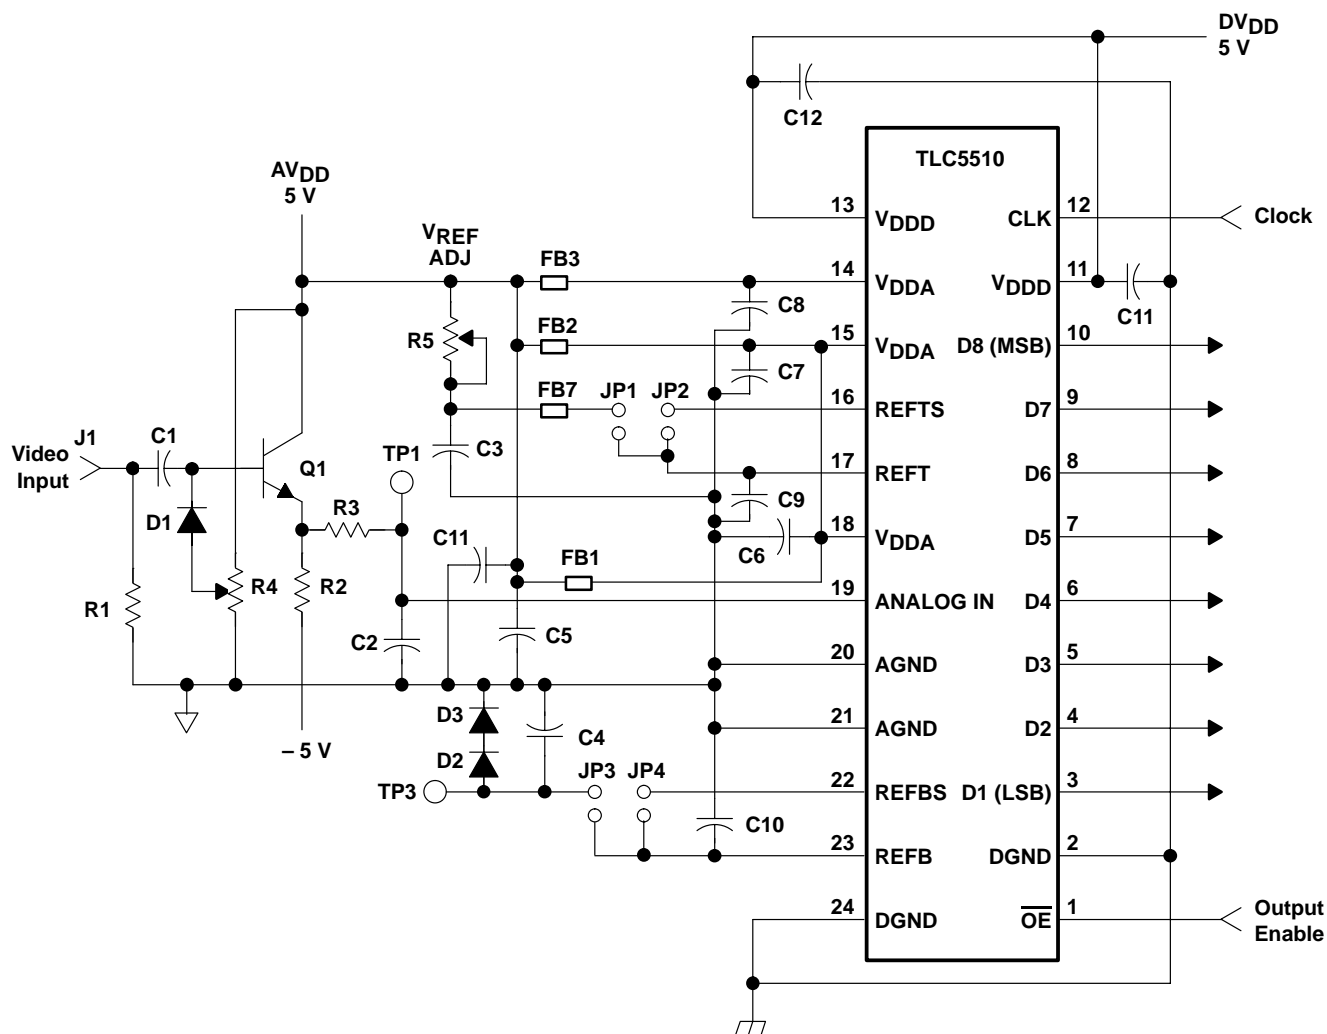

- External analog and digital circuitry should be physically separated and shielded as much as possible to reduce system noise.
- RF breadboarding or printed-circuit-board (PCB) techniques should be used throughout the evaluation and production process. Breadboards should be copper clad for bench evaluation.
- Since AGND and DGND are connected internally, the ground lead in must be kept as noise free as possible. A good method to use is twisted-pair cables for the supply lines to minimize noise pickup. An analog and digital ground plane should be used on PCB layouts when additional logic devices are used. The AGND and DGND terminals of the device should be tied to the analog ground plane.
- $V_{DDA}$  to AGND and  $V_{DDD}$  to DGND should be decoupled with 1- $\mu$ F and 0.01- $\mu$ F capacitors, respectively, and placed as close as possible to the affected device terminals. A ceramic-chip capacitor is recommended for the 0.01- $\mu$ F capacitor. Care should be exercised to ensure a solid noise-free ground connection for the analog and digital ground terminals.
- $V_{DDA}$ , AGND, and ANALOG IN should be shielded from the higher frequency terminals, CLK and D0–D7. When possible, AGND traces should be placed on both sides of the ANALOG IN traces on the PCB for shielding.
- In testing or application of the device, the resistance of the driving source connected to the analog input should be 10  $\Omega$  or less within the analog frequency range of interest.

POST OFFICE BOX 655303 • DALLAS, TEXAS 75265

### APPLICATION INFORMATION

NOTE A: Shorting JP1 and JP3 allows adjustment of the reference voltage by R5 using temperature-compensating diodes D2 and D3 which compensate for D1 and Q1 variations. By shorting JP2 and JP4, the internal divider generates a nominal 2-V reference.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
