EVAL BOARD USER'S MANUAL

Table 1. GENERAL SPECIFICATIONS

Devices	Applications	Input Voltage	Output Power	Topology	Board Size
FSL538HPG	White Goods and Industrial Power Supplies	85–265 Vac	14.5 W	Non-Isolated Flyback	88 × 45 × 22 mm 2.73 W/inch ³
Output Spec.	Turn on Time	Efficiency	Operating Temperature	Cooling	Standby Power
12 V/1 A & 5 V/0.5 A	< 200 ms	Above 85% @ Full Load	0–50°C	Convection Open Frame	< 50 mW @ 230 Vac

Description

This user manual provides elementary information about a Non-isolated dual output flyback with FSL538HPG, it performs high efficiency and smaller than 50 mW no-load power consumption. FSL538HPG is an integrated pulse width modulation (PWM) and 800 V power switch with SENSEFET®, it can help to save external MOSFET and sense resistor, increase power density and reliability. This application is targeting auxiliary power supply for white goods and industrial equipment, such as refrigerator, E-metering or similar types of equipment.

The PWM controller includes an integrated variable frequency oscillator, Under-Voltage Lockout (UVLO), Leading Edge Blanking (LEB), optimized gate driver, internal soft-start, and built-in error amplifier for feedback connection directly and self-protection circuitry. This design focuses mainly on the FSL538HPG current-mode PWM controller. Please refer to FSL538HPG's materials to get more information about this device.

The FSL538HPG is a current-mode PWM controller, it can have better response to handle dynamic operation. Controller combines line detection and burst-mode adjustment in one pin. It's easy to achieve these functionalities just need voltage divider and one Zener diode. Line detection includes brown-in, brown-out and line OVP, burst-mode adjustment is for fine tune audible noise and light load efficiency. Of course, it also provides frequency reduction with loading decreasing for gaining more design margin to improve light load efficiency.

Key Features

- Integrated Rugged 800 V Super Junction MOSFET with SENSEFET Technology
- Built-in HV Current Source for Start-up
- Peak-Current-Mode Control with Slope Compensation
- Line Compensation for Maximum Over-Power Limiting
- Advanced Soft-start for Low Electrical Stress
- Pulse-by-pulse Current Limit
- Line Brown-in, Brown-out, and Over-Voltage Protection (LOVP)
- Adjustable Burst-mode Operation
- Frequency Hopping for Better EMI
- Various Protections:
 - ◆ Auto Restart Mode: Brown-out, OLP, OVP, AOCV and TSD
 - ◆ Recovery Immediately by Triggering Level: LOVP

DETAIL DEMO-BOARD SCHEMATIC DESCRIPTION

Figure 1. FSL538HFLYGEVB Demo-Board – Main Board Schematic

The input EMI filter is formed by components L1 and C1. Bleeder for X-cap, R27 and R28, are left not connected.

The primary side of flyback converter is composed of these devices; power transformer TX1, dc-link capacitor, TVS snubber, the integrated switcher U1(FSL538HPG) and related components. Meanwhile, the integrated switcher has a peak current mode PWM controller and 800 V super junction MOSFET. D1, R3 and D8 form TVS snubber to protect instant voltage spike produced by leakage inductance. R19 (or R13) and R14 (or R20) are a voltage divider to sense the output voltage, which needs a capacitor C13 optionally to avoid switching noise interference and stabilize FB pin voltage. COMP pin is the output of the internal error amplifier, where a compensation network, for example R23, C3 and C10 are connected and it generates a control voltage for PWM controller. LINE pin of U1 connects voltage divider from bulk capacitor to detect input voltage for some protections of brown-in, brown-out and LOVP. Besides, there is parallel-connected D2 on LINE pin to adjust burst threshold to fine tune audible noise and light load efficiency. C17 is used to avoid larger switching noise

interference, which is usually recommended around 1 nF~3.3 nF. Auxiliary winding shares same ground reference with U1. That is, reference ground is negative terminal of output of bridge rectifier BD1. Transformer winding is also used for providing VCC voltage in normal operation. R9 and D3 provide path to delivery energy when PWM is turned off. C16 can keep enough voltage if PWM is turned off for a while, and C15 is for better stability.

The secondary-side output is composed of two outputs. One is 12 V output terminal in which there are D5, C6 and C6A. The other is 5 V output terminal that composed of D7, C18 and C18A. When the MOSFET integrated in the switcher turns off, energy stored in the coupled inductor is transferred to the secondary side. At the time, there is switching noise on the output voltage, which can be, however, reduced by a LC filter on each output terminal formed by L2 and C7 (L3 and C19). R12 and R10 are used as dummy load to avoid V_{CC} self supply operation for better no load power consumption. The ground is same to reference ground of primary side.

SENSEFET is a registered trademark of Semiconductor Components Industries, LLC (SCILLC) or its subsidiaries in the United States and/or other countries.

ON Semiconductor and the ON Semiconductor logo are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.

The evaluation board/kit (research and development board/kit) (hereinafter the "board") is not a finished product and is as such not available for sale to consumers. The board is only intended for research, development, demonstration and evaluation purposes and should as such only be used in laboratory/development areas by persons with an engineering/technical training and familiar with the risks associated with handling electrical/mechanical components, systems and subsystems. This person assumes full responsibility/liability for proper and safe handling. Any other use, resale or redistribution for any other purpose is strictly prohibited.

The board is delivered "AS IS" and without warranty of any kind including, but not limited to, that the board is production-worthy, that the functions contained in the board will meet your requirements, or that the operation of the board will be uninterrupted or error free. ON Semiconductor expressly disclaims all warranties, express, implied or otherwise, including without limitation, warranties of fitness for a particular purpose and non-infringement of intellectual property rights.

ON Semiconductor reserves the right to make changes without further notice to any board.

You are responsible for determining whether the board will be suitable for your intended use or application or will achieve your intended results. Prior to using or distributing any systems that have been evaluated, designed or tested using the board, you agree to test and validate your design to confirm the functionality for your application. Any technical, applications or design information or advice, quality characterization, reliability data or other services provided by ON Semiconductor shall not constitute any representation or warranty by ON Semiconductor, and no additional obligations or liabilities shall arise from ON Semiconductor having provided such information or services.

The boards are not designed, intended, or authorized for use in life support systems, or any FDA Class 3 medical devices or medical devices with a similar or equivalent classification in a foreign jurisdiction, or any devices intended for implantation in the human body. Should you purchase or use the board for any such unintended or unauthorized application, you shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the board.

This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and may not meet the technical requirements of these or other related directives.

FCC WARNING – This evaluation board/kit is intended for use for engineering development, demonstration, or evaluation purposes only and is not considered by ON Semiconductor to be a finished end product fit for general consumer use. It may generate, use, or radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment may cause interference with radio communications, in which case the user shall be responsible, at its expense, to take whatever measures may be required to correct this interference.

ON Semiconductor does not convey any license under its patent rights nor the rights of others.

LIMITATIONS OF LIABILITY: ON Semiconductor shall not be liable for any special, consequential, incidental, indirect or punitive damages, including, but not limited to the costs of requalification, delay, loss of profits or goodwill, arising out of or in connection with the board, even if ON Semiconductor is advised of the possibility of such damages. In no event shall ON Semiconductor's aggregate liability from any obligation arising out of or in connection with the board, under any theory of liability, exceed the purchase price paid for the board, if any.
