

Evaluation Board for the AD5172 Digital Potentiometer

FEATURES

Full-featured evaluation board for the AD5172
 Various test circuits
 Various ac/dc input signals
 PC control via a separately purchased system development platform (SDP)
 PC software for control
 Resistor tolerance error stored in EEMEM

PACKAGE CONTENTS

EVAL-AD5172SDZ board
 CD that includes
 Self-installing software that allows users to control the board and exercise all functions of the device
 Electronic version of the [AD5172](#) data sheet
 Electronic version of the UG-243 user guide

GENERAL DESCRIPTION

This user guide describes the evaluation board for evaluating the AD5172, a dual-channel, 256-position, one-time programmable (OTP) memory digital potentiometer that employ fuse link technology to achieve memory retention of resistance settings.

The on-board socket allows the user to easily replace the device for reprogramming of the OTP memory.

The AD5172 supports a single-supply 2.7 V to 5.5 V operation, making the device suited for battery-powered applications and many other applications with a superior low temperature coefficient performance.

In addition, the AD5172 uses a versatile I²C serial interface that operates in fast mode, allowing speeds of up to 400 kHz.

The EVAL-AD5172SDZ can operate in single-supply mode and incorporates an internal power supply from the USB.

Complete specifications for the AD5172 part can be found in the AD5172 data sheet, which is available from Analog Devices, Inc., and should be consulted in conjunction with this user guide when using the evaluation board.

REVISION HISTORY

1/11—Revision 0: Initial Version

EVALUATION BOARD HARDWARE

POWER SUPPLIES

The EVAL-AD5172SDZ supports using single power supplies.

The evaluation board can be powered either from the SDP port or externally by the J1-1 and J1-2 connectors, as described in Table 1.

All supplies are decoupled to ground using 10 μ F tantalum and 0.1 μ F ceramic capacitors.

Table 1. Maximum and Minimum Voltages of the Connectors

Connector No.	Label	Voltage
J1-1	EXT	Analog positive power supply, V_{DD} .
	VDD	For single-supply operation, it is 2.7 V to 5 V.
J1-2	GND	Analog ground.

Table 3. Link Functions

Link No.	Power Supply	Options
A25	V_{DD}	This link selects one of the following as the positive power supply: 5 V (from SDP). 3.3 V (from SDP). EXT (external supply from the J1-1 connector).
A24	V_{SS}	This link should be connected to GND (analog ground).

LINK OPTIONS

Several link and switch options are incorporated in the evaluation board and should be set up before using the board. Table 2 describes the positions of the links to control the evaluation board by a PC, via the SDP board, using the EVAL-AD5172SDZ in single-supply mode. The functions of these link options are described in detail in Table 3 through Table 6.

Table 2. Link Options Setup for SDP Control (Default)

Link No.	Option
A25	3.3 V
A24	GND

TEST CIRCUITS

The EVAL-AD5172SDZ incorporates several test circuits to evaluate the AD5172 performance.

DAC

RDAC1 can be operated as a digital-to-analog converter (DAC), as shown in Figure 2.

Figure 2. DAC

Table 4 shows the options available for the voltage references.

Table 4. DAC Voltage References

Terminal	Link	Options	Description
A1	A20	AC + DC VDD	Connects Terminal A1 to $(V_{DD} - V_{SS})/2$ Connects Terminal A1 to V_{DD}
W1	BUF_W1		Connects Terminal W1 to an output buffer
B1	A21	DC GND	Connects Terminal B1 to $(V_{DD} - V_{SS})/2$ Connects Terminal B1 to analog ground

The output voltage is defined in Equation 1.

$$V_{OUT} = (V_{A1} - V_{B1}) \times \frac{R_{WB1}}{256} \quad (1)$$

where:

R_{WB1} is the resistor between the W1 and B1 terminals.

V_{A1} is the voltage applied to the A1 terminal (A20 link).

V_{B1} is the voltage applied to the B1 terminal (A21 link)

However, by using the R34 and R35 external resistors, the user can reduce the voltage of the voltage references. In this case, use the A1 and B1 test points to measure the voltage applied to the A0 and B0 terminals and recalculate V_{A0} and V_{B0} in Equation 1.

AC Signal Attenuation

RDAC1 can be used to attenuate an ac signal, which must be provided externally using the AC_INPUT connector, as shown in Figure 3.

Figure 3. AC Signal Attenuator.

Depending on the voltage supply rails and the dc offset voltage of the ac signal, various configurations can be used as described in Table 5.

Table 5. AC Signal Attenuation Link Options

Link	Options	Conditions
A20	AC + DC AC	No dc offset voltage. AC signal is outside the voltage supply rails due to the dc offset voltage. DC offset voltage $\neq V_{DD}/2$ ¹ . All other conditions.
A21	DC GND	Use in conjunction with ac + dc link. All other conditions.

¹ Recommended to ensure optimal total harmonic distortion (THD) performance.

The signal attenuation is defined in Equation 2.

$$Attenuation \text{ (dB)} = 20 \times \log \left(\frac{R_{WB1} + R_W}{R_{END-TO-END}} \right) \quad (2)$$

where:

R_{WB1} is the resistor between the W1 and B1 terminals.

R_W is the wiper resistance.

$R_{END-TO-END}$ is the end-to-end resistance value.

In addition, R36 can be used to achieve a pseudologarithmic attenuation. To do so, adjust the R36 resistor until a desirable transfer function is found.

Signal Amplifier

RDAC2 can be operated as an inverting or noninverting signal amplifier supporting linear or pseudo logarithmic gains. Table 6 shows the available configurations.

The noninverting amplifier with linear gain is shown in Figure 4, and the gain is defined in Equation 3.

$$G = 1 + \frac{R_{WB2}}{R38} \quad (3)$$

where R_{WB2} is the resistor between the W2 and B2 terminals.

Figure 4. Linear Noninverting Amplifier

The noninverting amplifier with pseudologarithmic gain is shown in Figure 5, and the gain is defined in Equation 4.

$$G = 1 + \frac{R_{WB2}}{R_{AW2}} \quad (4)$$

where:

R_{WB2} is the resistor between the W2 and B2 terminals.

R_{AW2} is the resistor between the A2 and W2 terminals.

Figure 5. Pseudologarithmic Noninverting Amplifier

R43 and R42 can be used to set the maximum and minimum gain limits.

The inverting amplifier with linear gain is shown in Figure 6, and the gain is defined in Equation 5.

Note that the input signal, V_{IN} , must be negative.

$$G = -\frac{R_{WB2}}{R38} \quad (5)$$

where R_{WB2} is the resistor between the W2 and B2 terminals.

Figure 6. Linear Inverting Amplifier

Table 6. Amplifier Selection Link Options

Amplifier	Gain	Link	Label	V _{IN} Range
Noninverting	Linear	A27	LINEAR	0 V to V _{DD}
		A29	NON-INV	
		A30	NON-INV	
	Pseudo logarithmic	A27	PSEUDOLOG	0 V to V _{DD}
		A29	NON-INV	
		A30	NON-INV	
Inverting	Linear	A27	LINEAR	-V _{DD} to 0 V
		A29	INV	
		A30	INV	

EVALUATION BOARD SOFTWARE

INSTALLING THE SOFTWARE

The EVAL-AD5172SDZ evaluation kit includes evaluation board software provided on a CD. The software is compatible with Windows® XP, Windows Vista, and Windows 7 (both 32 bits and 64 bits).

Install the software before connecting the **SDP board** to the USB port of the PC to ensure that the SDP board is recognized when it is connected to the PC.

1. Start the Windows operating system and insert the CD.
2. The installation software opens automatically. If it does not, run the **setup.exe** file from the CD.
3. After installation is completed, power up the evaluation board as described in the Power Supplies section.
4. Connect the EVAL-AD5172SDZ into the SDP board and the SDP board into the PC using the USB cable included in the evaluation kit.
5. When the software detects the evaluation board, follow the instructions that appear to finalize the installation.

RUNNING THE SOFTWARE

To run the program, do the following:

1. Click **Start > All Programs > Analog Devices > AD5172 > AD5172 Eval Board**. To uninstall the program, click

Start > Control Panel > Add or Remove Programs > AD5172 Eval Board.

2. If the SDP board is not connected to the USB port when the software is launched, a connectivity error displays (see Figure 7). Simply connect the evaluation board to the USB port of the PC, wait a few seconds, click **Rescan**, and follow the instructions.

Figure 7. Pop-Up Window Error

The main window of the EVAL-AD5172SDZ evaluation software then opens, as shown in Figure 8.

Figure 8. EVAL-AD5172SDZ Evaluation Board Software Main Window

SOFTWARE OPERATION

The main window of the EVAL-AD5172SDZ software is divided into the following sections: **RDAC1**, **RDAC2**, and **MANUAL WRITE**.

RDAC1 and **RDAC2** have the following options:

- **WRITE** can be used to update the RDAC registers by entering a desirable value into the text box and clicking **WRITE**. When **WRITE** is clicked, a write/read operation is performed, and the value displayed in this section is updated with the actual RDAC register value. This function can be used to verify whether the write operation was completed successfully.
- **SHUTDOWN** connects the wiper to the B terminal and open circuits the A terminal. When the button is clicked, the bit toggles automatically.
- **RESET** loads the value stored in the fuses. The button is disabled if the fuses are not programmed or if a fatal error occurred during the blowing.
- **PROGRAM** allows you to program the fuses. The A25 link must be connected to 5 V. If the board is operated at a

different supply, close the program, change the link, and rerun the software. The button is disabled if the fuses are programmed or if a fatal error occurred during the fuse blowing.

Due to the supply voltage limitations of the SDP board, the fuses are blown at 5 V. This voltage is lower than the recommended voltage (5.6 V), and a proper blow is not guaranteed.

- **FUSE STATUS** shows the fuse status.

MANUAL WRITE has the following options:

- **SEND DATA**—A customized I²C data-word can be sent by manually switching the scroll bars from 0 to 1 or from 1 to 0 as desired and then clicking **SEND DATA**. The number of bytes to send can be selected by switching **BYTES TO SEND** to 1 or 2.
In addition, the scroll bars are updated on each write transfer, showing the command sent to the part.
- **EXIT** closes the program but does not reset the part.

NOTES

I²C refers to a communications protocol originally developed by Philips Semiconductors (now NXP Semiconductors).

**ESD Caution**

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. **CONFIDENTIALITY.** This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. **ADDITIONAL RESTRICTIONS.** Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. **TERMINATION.** ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. **LIMITATION OF LIABILITY.** THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NONINFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). **EXPORT.** Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. **GOVERNING LAW.** This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
