General Description

The SY100EP32V is an integrated $\div 2$ divider with differential clock inputs.

The VBB pin, an internally generated voltage supply, is available to this device only. For single-ended input conditions, the unused differential input is connected to VBB as a switching reference voltage. VBB may also rebias AC-coupled inputs. When used, decouple VBB and VCC via a $0.01\ \mu\text{F}$ capacitor and limit current sourcing or sinking to $0.5\ \text{mA}$. When not used, VBB should be left open.

The RESET pin is asynchronous and is asserted on the rising edge. Upon power-up, the internal flip-flops will attain a random state; the RESET allows for the synchronous use of multiple EP32 in a system.

Under open input conditions, the CLK input and the reset input will be pulled to GND. The /CLK input will be biased at half of the supply voltage. The 100K series includes internal temperature compensation circuitry.

1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings †

PECL Power Supply Voltage (V_{CC}) (Note 1)	+6V
NECL Power Supply Voltage (V_{EE}) (Note 2)	-6V
PECL Mode Input Voltage (V_{IN}) (Note 3)	+6V
NECL Mode Input Voltage (V_{IN}) (Note 4)	-6V

Surge Output Current (I_{OUT})	100 mA
VBB Sink/Source Current (I_{BB}) (Note 5)	±0.5 mA

† **Notice:** Stresses above those listed under “Absolute Maximum ratings” may cause permanent damage to the device. Exposure to maximum rating conditions for extended periods may affect device reliability.

Note 1: $V_{CC} = 0V$.

2: $V_{EE} = 0V$.

3: $V_{EE} = 0V$, $V_{IN} \leq V_{CC}$.

4: $V_{CC} = 0V$, $V_{IN} \geq V_{EE}$.

5: Due to the limited drive capability, the VBB reference should only be used for the input of the same package device (i.e., do not use for other devices).

NOTES:

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
