1 Important Notice

Freescal provides the enclosed product(s) under the following conditions:

This evaluation kit is intended for use of ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY. It is provided as a sample IC pre-soldered to a printed circuit board to make it easier to access inputs, outputs, and supply terminals. This evaluation kit may be used with any development system or other source of I/O signals by simply connecting it to the host MCU or computer board via off-the-shelf cables. Final device in an application will be heavily dependent on proper printed circuit board layout and heat sinking design as well as attention to supply filtering, transient suppression, and I/O signal quality.

The goods provided may not be complete in terms of required design, marketing, and or manufacturing related protective considerations, including product safety measures typically found in the end product incorporating the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. In order to minimize risks associated with the customers applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards. For any safety concerns, contact Freescale sales and technical support services.

Should this evaluation kit not meet the specifications indicated in the kit, it may be returned within 30 days from the date of delivery and will be replaced by a new kit.

Freescal reserves the right to make changes without further notice to any products herein. Freescale makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does Freescale assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation consequential or incidental damages. "Typical" parameters can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typical", must be validated for each customer application by customer's technical experts.

Freescal does not convey any license under its patent rights nor the rights of others. Freescale products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or other applications intended to support or sustain life, or for any other application in which the failure of the Freescale product could create a situation where personal injury or death may occur.

Should the Buyer purchase or use Freescale products for any such unintended or unauthorized application, the Buyer shall indemnify and hold Freescale and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that Freescale was negligent regarding the design or manufacture of the part. 2 Getting Started

2.1 Kit Contents/Packing List

- Customer evaluation board KITPF0100EPEVBE
- Warranty card and technical support brochure

3 Introduction

The KITPF0100EPEVBE evaluation board supports the development and testing of the PF0100 PMIC, a member of Freescale's i.MX6 family of application processors. The board provides access to all output voltage rails as well as control and signal pins through terminal block connectors. A single terminal block connector for the input power supply allows the user to supply the board with an external DC power supply to fully evaluate the performance of the device.

The KITPF0100EPEVBE comes with a non-programmed version of the PF0100 PMIC that is prepared to power up from the default sequence. However, an integrated control/fuse programming interface allows the customer to program the OTP/TBB (One Time Programmable/Try-Before-Buy) memory and also to select it as the default source for the power-up configuration. Likewise, the programming interface allows full control of the PF0100 through the I²C communication lines.

This document is intended to provide an overview of the KITPF0100EPEVBE evaluation board as well as detailed instruction for programming the PF0100 through its dedicated Graphic User Interface (GUI).

4 KITPF0100EPEVBE Features

- Input voltage operation range from 3.1 V to 4.5 V
- Output voltage supplies accessible through detachable terminal blocks
 - Four to six independent buck converters
 - One 5.0 V boost regulator
 - Six general purpose LDO regulators
 - One DDR memory termination voltage reference
 - One VSRTC supply
- Coin cell support for "Try-Before-Buy" (TBB) mode
- On/off push button support
- Hardware configuration flexibility through various jumper headers and resistors
- Integrated USB to I²C programming interface for full control/configuration
 - Onboard OTP programming supply and control
 - Onboard PMIC control through the I²C register map
 - Fully featured programmer through J36 for external device control/programming
- On board connectors for interfacing with future evaluation/debug tools
- Compact form factor (4 x 4 in²)

5 MMPF0100 Features

The PF0100 Power Management Integrated Circuit (PMIC) provides a highly programmable/ configurable architecture with fully integrated power devices and minimal external components. With up to six buck converters, six linear regulators, RTC supply, and coin-cell charger, the PF0100 can provide power for a complete system, including applications processors, memory, and system peripherals, in a wide range of applications.

- Four to six buck converters, depending on configuration
 - Single/Dual phase/ parallel options
 - DDR termination tracking mode option
- Boost regulator to 5.0 V output
- Six general purpose linear regulators
- Programmable output voltage, sequence, and timing
- OTP (One Time Programmable) memory for device configuration
- Coin cell charger and RTC supply
- DDR termination reference voltage
- Power control logic with processor interface and event detection
- Individually programmable ON, OFF, and Standby modes

Freescale analog ICs are manufactured using the SMARTMOS process, a combinational BiCMOS manufacturing flow which integrates precision analog, power functions, and dense CMOS logic on a single cost-effective die.

5.1 MC9S08JM60 Features

The KITPF0100EPEVBE implements a Freescale MC9S08JM60 low-cost, high-performance 8-bit HCS08 microcontroller to interface via USB to I2C to control the main PMIC.

- 8-bit HCS08 Central Processing Unit (CPU)
 - Up to 24 MHz internal bus (48 MHz HCS08 core) frequency offering 2.7 to 5.5 V across temperature range of -40 to +85 °C
 - Support for up to 32 peripheral interrupt/reset sources
- On-Chip Memory
 - Up to 60 K flash read/program/erase over full operating voltage and temperature
 - Up to 4 K RAM
 - 256 Byte USB RAM

6 Hardware/Software Requirements

6.1 Hardware Requirements

- Power supply:
 - Output voltage range from 3.1 V to 4.5 V
 - Current capability from 3 to 5 A (current requirement is dependent on output loading)
- Supply to board connection cables (capable of withstanding up to 5.0 A current)
- USB (male) to mini USB (male) communication cable.
- USB-enabled computer.

6.2 Software Requirements

- Windows XP or Windows 7 operating system

7 Hardware Configuration

Connect the power supply and the USB communication cables as shown in [Figure 2](#). Voltmeters are optional but it is recommended in order to accurately verify that each one of the output supplies is providing the correct voltage level.

Figure 2. Evaluation Board Setup

Note: The KITPF0100EPEVBE allows the selection of SW2 regulator output or an external 3.3 V LDO output as the VDDIO/I²C pull-up supply. By default, the SW2 regulator is the source for the VDDIO supply (J46 = 3-4). If the SW2 regulator is to be set below 3.0 V then switch the 3.3 V LDO connection to VDDIO (J46 = 1-2.)

8 Evaluation Board Schematic

Figure 5. KITPF0100EPEVBE Switching Regulators Schematic

Figure 6. KITPF0100EPEVBE Control/Programming Interface Schematic

9 Hardware Description

The KITPF0100EPEVBE operates with a single power supply from 3.1 V to 4.5 V and is controlled via USB with help of an integrated USB-I²C communication bridge. By applying the input voltage supply, the KITPF0100EPEVBE powers up according to the default power-up sequence described in the [MMPF0100 Data Sheet](#).

Important notice: If power-up sequences and configuration are to be modified, the user must ensure that the register settings are consistent with the hardware configuration. This is most important for the buck regulators, where the quantity, size, and value of the inductors depend on the configuration (single/dual phase or independent mode) and the switching frequency. Additionally, if an LDO is powered by a buck regulator, it is gated by the buck regulator in the start-up sequence. Refer to the [MMPF0100 Data Sheet](#) for details on buck regulator setup.

9.1 Jumper Description

By default, the KITPF0100EPEVBE evaluation board is set to power up from the default power-up sequence. Verify that the jumpers are placed in the right position as shown in [Figure 7](#). For a detailed description of the jumper functionality, refer to [Table 1](#).

Figure 7. Default Jumper Configuration Diagram

Table 1. KITPF0100EPEVBE Jumper Description

Jumper	Default	Description
J1-J7	Closed	Buck regulators input power path isolation. Short these jumpers to allow SWxIN to be powered from the SWVIN supply.
J9	Closed	SWBST regulator input power path isolation. Short this jumper to allow SWBSTIN to be powered from the SWVIN supply.

Table 1. KITPF0100EPEVBE Jumper Description (continued)

Jumper	Default	Description
J17	5-6	VDDOTP Supply selector • 1-2: Connect VDDOTP to the OTP Boost output (VDDOTPIN) for OTP programming. • 3-4: Connect VDDOTP to GND to power up from OTP/TBB sequence. • 5-6: Connect VDDOTP to VCOREDIG to power up from Default Power up sequence.
J20	1-2	Coin cell selector. • 1-2: Enables BAT1 as the main coin cell supply. • 2-3: Enables BAT2 as the main coin cell supply.
J40	Closed	Shorts PVIN and SWVIN. Allows supply isolation to provide more accurate efficiency readings on the switching supplies.
J41	Open	Shorts SWVIN to VIN. Allows one to isolate or connect the PF0100 logic input supply to SWVIN net. (debugging option)
J27	Closed	Shorts PVIN to VIN. Allows one to isolate or connect the PF0100 logic input supply to PVIN net. (debugging option)
J22	2-3	PF0100 input logic supply selector. • 1-2: Connects PF0100 VIN terminal to the 3.3 V external LDO regulator for debugging purposes. • 2-3: Connects PF0100 VIN terminal to the main input supply. Refer to Figure 3.
J26	Open	Short to hold PWRON pin low.
J24	Open	Short to pull STANDBY to VSNVS voltage supply.
J39	1-2	Control Interface input supply selector • 1-2: Enables PVIN node as the input supply source for the control interface. • 2-3: Enables USB power as the input supply source for the control interface.

9.2 Connectors and Terminal Blocks Description

Table 2. Terminal Blocks descriptions

Connector	Function	Pin definition
J8	SWBST	Pin 1 - SWBST Output Pin 2 - GND
J10	SW1AB	Pin 1 - SW1AB Output Pin 2 - GND
J11	SW1C	Pin 1 - SW1C Output Pin 2 - GND
J12	SW2	Pin 1 - SW2 Output Pin 2 - GND
J13	SW4	Pin 1 - SW4 Output Pin 2 - GND
J14	SW3A	Pin 1 - SW3A Output Pin 2 - GND
J15	SW3B	Pin 1 - SW3B Output Pin 2 - GND
J16	VGEN1/VGEN2	Pin 1 - VGEN1 Output Pin 2 - GND Pin 3 - VGEN2 Output
J18	VGEN3/VGEN4	Pin 1 - VGEN3 Output Pin 2 - GND Pin 3 - VGEN4 Output
J19	VGEN5/VGEN6	Pin 1 - VGEN5 Output Pin 2 - GND Pin 3 - VGEN6 Output

Table 2. Terminal Blocks descriptions (continued)

Connector	Function	Pin definition
J21	VSNVS/VREFDDR	Pin 1 - VSNVS Output Pin 2 - GND Pin 3 - VREFDDR Output
J25	Main Input Supply	Pin 1 - GND Pin 2 - PVIN Pin 3 - SWVIN
J29	Interfacing 1	Pin 1 - INTB Pin 2 - SDWNB Pin 3 - RESETBMCU
J32	Interfacing 2	Pin 1 - STANDBY Pin 2 - PWRON Pin 3 - GND
J31	I ² C Signals	Pin 1 - SCL Pin 2 - SDA
J33	VDDIO	Pin 1 - VDDIO Pin 2 - GND

Figure 8. Input/Output Terminal Blocks

Table 3. Connector Description

Connector	Function	Pin definition
J34	Mini USB connector	Pin 1 - VBUS Pin 2 - D- Pin 3 - D+ Pin 4 - NC Pin 5 - GND Chassis - GND
J35	BDM connector	Pin 1 - BKGD_JM60 Pin 2 - GND Pin 3 - NC Pin 4 - RST_JM60 Pin 5 - NC Pin 6 - USB_PWR
J36	Programmer connector	Pin 1 - VDDOTPIN (8.5V boost output) Pin 2 - 3V3 (3.3 V LDO output) Pin 3 - GND Pin 4 - MCU_SCL (I ² C clock signal) Pin 5 - MCU_SDA (I ² C data signal) Pin 6 - PWRON (Controls the PWRON on the target device) Pin 7 - GPIO 1 (General Purpose GPIO) Pin 8 - GPIO 2 (General Purpose GPIO)
J42	Debug Port 1	Debugging connector for future development tools. 
J43	Debug Port 2	Debugging connector for future development tools 
J44	Debug Port 3	Debugging connector for future development tools 

9.3 Debug and Configuration Components

The KITPF0100EPEVBE allows full flexibility to change the default configuration of SW1A/B/C and SW3A/B outputs to one more suitable for a specific application scenario. It also provides several source options for the LDO supplies to test various loading and supplying scenarios.

Test points are provided on key nodes of the KITPF0100EPEVBE to allow full debugging capability during application development.

9.3.1 SW1A/B/C Configuration Components

Figure 9. SW1A/B/C Output Configuration

The SW1A/B/C regulator can be configured in various operating modes as described in Table 4.

Table 4. SW1ABC Configuration Chart

Component	SW1A/B/C Single phase	SW1A/B Single phase SW1C independent	SW1A/B Dual phase SW1C independent
R6	Closed	Closed	DNP
R9	Closed	DNP	DNP
R4	Closed	Closed	Closed
R7	Closed	DNP	Closed
R8	DNP	DNP	Closed
R10	Closed	DNP	DNP
R11	DNP	Closed	Closed
L2	1.0 μ H ISAT = 6.0 A	1.0 μ H ISAT = 4.5 A	1.0 μ H ISAT = 2.4 A
L3	N/A	N/A	1.0 μ H ISAT = 2.4 A
L4	N/A	1.0 μ H ISAT = 2.4 A	1.0 μ H ISAT = 2.4 A

9.3.2 SW3A/B Configuration Components

Figure 10. SW3A/B Output Configuration

The SW3A/B regulator can be configured in various operating modes as described in Table 5.

Table 5. SW3ABC Configuration Chart

Component	SW3A/B Single phase	SW3A/B Dual phase	SW3A Independent SW3B Independent
R16	Closed	DNP	DNP
R17	Closed	Closed	DNP
R70	DNP	Closed	Closed
L7	1.0 μ H ISAT = 3.9A	1.0 μ H ISAT = 3.0A	1.0 μ H ISAT = 3.0 A
L8	N/A	1.0 μ H ISAT = 3.0 A	1.0 μ H ISAT = 3.0 A

9.3.3 LDO Input Supply Source Selection

Figure 11. LDO Schematic Configuration

Figure 12. Logic and Core Supplies Schematic

Table 6. LDO Input Supply Configuration Chart

Input Pin	Input options
VIN1	Input supply for VGEN1 and VGEN2 R20 = SW4 R21 = SW2
VIN2	Input supply for VGEN3 and VGEN4 R24 = SW4 R22 = SW2
VIN3	Input supply for VGEN5 and VGEN6 R23 = VIN R25 = SW2
VINREFDDR	VREFDDR input supply R26 = SW3A R27 = SW3B
VDDIO	VDDIO Input supply 3V3 J46 = 1-2 SW2 J46 = 2-3

1. Make sure to populate only one option per input pin to avoid shorts between various sources.

9.3.4 Test point

All test points are clearly marked on the KITPF0100EPEVBE evaluation board. Figure 13 shows the location of various test points of interest during evaluation.

Figure 13. Key Test Point Locations and Default Voltages

Table 7 describes the meaning of the LED states.

Table 7. LED State Description

LED	Description
D2	Interrupt Notification ON = PMIC has detected an unmasked interrupt OFF = No interrupt detected
D4	RESETBMCU Notification Green = PMIC is in regulation and operating properly Red = PMIC is out of regulation
D3	Reserved debug LED ON = Q3 gate (R84 pad) is low OFF = Q3 gate (R84 pad) is high or floating

9.4.3 Control/Programming Interface

This onboard USB-to-I²C interface comprises three basic blocks.

1. Controlling MCU (MC9S08JM60CGTE) for USB-I²C translation.
2. 3.3 V LDO supply for external device controlling.
3. 8.25 V boost converter for OTP programming.

The control/programming interface allows one to program the onboard PF0100 PMIC. Alternatively, the interface can serve as a programmer for external devices through the connector J36.

Visit Freescale.com/warranty to submit a request for tool warranty.

13 Revision History

Revision	Date	Description of Changes
1.0	11/2012	Initial Release
2.0	2/2013	- Updated document for the latest GUI Revision 3.0.0.20 - Added Figure 14 to section 8 Evaluation Board Schematic - Added TBB operation Mode. - Updated section 12.4 Using the Script Editor - Updated section 12.5 Loading a Configuration File
3.0	12/2013	- Added section 5 MMPF0100 Features - Added section 6 Hardware/Software Requirements
4.0	2/2015	Removed references to older revision of EVB and GUI
5.0	8/2015	Updated the Evaluation Board Schematic and related descriptions
	8/2015	- Deleted section 6 KITPF0100EPEVBE Hardware/Software Deviation - Deleted Manufacturer column from Table 8
