

## SN74AUP1G57 Low-Power Configurable Multiple-Function Gate

### 1 Features

- Available in the Texas Instruments NanoStar™ Packages
- Low Static-Power Consumption ( $I_{CC} = 0.9 \mu\text{A}$  Maximum)
- Low Dynamic-Power Consumption ( $C_{pd} = 4.3 \text{ pF}$  Typical at 3.3 V)
- Low Input Capacitance ( $C_i = 1.5 \text{ pF}$  Typical)
- Low Noise – Overshoot and Undershoot  $<10\%$  of  $V_{CC}$
- $I_{off}$  Supports Partial-Power-Down Mode Operation
- Includes Schmitt-Trigger Inputs
- Wide Operating  $V_{CC}$  Range of 0.8 V to 3.6 V
- Optimized for 3.3-V Operation
- 3.6-V I/O Tolerant to Support Mixed-Mode Signal Operation
- $t_{pd} = 5.3 \text{ ns}$  Maximum at 3.3 V
- Suitable for Point-to-Point Applications
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Performance Tested Per JESD 22
  - 2000-V Human-Body Model (A114-B, Class II)
  - 1000-V Charged-Device Model (C101)

### 2 Applications

- Active Noise Cancellation (ANC)
- Barcode Scanners
- Blood Pressure Monitors
- CPAP Machines
- Cable Solutions
- E-Books
- Embedded PCs
- Field Transmitter: Temperature or Pressure Sensors
- HVAC: Heating, Ventilating, and Air Conditioning
- Network-Attached Storage (NAS)
- Server Motherboard and PSU
- Software Defined Radio (SDR)
- TV: High-Definition (HDTV), LCD, and Digital
- Video Communications Systems

### 3 Description

The SN74AUP1G57 device features configurable multiple functions. The output state is determined by eight patterns of 3-bit input. The user can choose the logic functions AND, OR, NAND, NOR, XNOR, inverter, and noninverter. All inputs can be connected to  $V_{CC}$  or GND.

**Device Information<sup>(1)</sup>**

| PART NUMBER    | PACKAGE    | BODY SIZE (NOM)  |
|----------------|------------|------------------|
| SN74AUP1G57YFP | DSBGA (6)  | 1.16 x 0.76 mm   |
| SN74AUP1G57YZP | DSBGA (6)  | 1.388 x 0.888 mm |
| SN74AUP1G57DRY | SON (6)    | 1.00 x 1.45 mm   |
| SN74AUP1G57DSF | SON (6)    | 1.00 x 1.00 mm   |
| SN74AUP1G57DBV | SOT-23 (6) | 2.80 x 2.90 mm   |
| SN74AUP1G57DCK | SC70 (6)   | 2.10 x 2.00 mm   |
| SN74AUP1G57DRL | SOT (6)    | 1.60 x 1.60 mm   |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 4 Revision History

### Changes from Revision I (May 2010) to Revision J

Page

- Added *Pin Configuration and Functions* section, *ESD Ratings* table, *Feature Description* section, *Device Functional Modes*, *Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section ..... **1**

## 5 Pin Configuration and Functions

### Pin Functions

| NAME            | PIN                  |       | I/O | DESCRIPTION   |
|-----------------|----------------------|-------|-----|---------------|
|                 | SOT-23,<br>SC70, SOT | DSBGA |     |               |
| In1             | 1                    | A1    | I   | Logic input 1 |
| GND             | 2                    | B1    | —   | Ground        |
| In0             | 3                    | C1    | I   | Logic input 0 |
| Y               | 4                    | C2    | O   | Logic output  |
| V <sub>CC</sub> | 5                    | B2    | —   | Power         |
| In2             | 6                    | A2    | I   | Logic input 2 |

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|                  |                                                                                       |                    | MIN  | MAX                   | UNIT |
|------------------|---------------------------------------------------------------------------------------|--------------------|------|-----------------------|------|
| V <sub>CC</sub>  | Supply voltage                                                                        |                    | −0.5 | 4.6                   | V    |
| V <sub>I</sub>   | Input voltage <sup>(2)</sup>                                                          |                    | −0.5 | 4.6                   | V    |
| V <sub>O</sub>   | Voltage applied to any output in the high-impedance or power-off state <sup>(2)</sup> |                    | −0.5 | 4.6                   | V    |
| V <sub>O</sub>   | Output voltage in the high or low state <sup>(2)</sup>                                |                    | −0.5 | V <sub>CC</sub> + 0.5 | V    |
| I <sub>IK</sub>  | Input clamp current                                                                   | V <sub>I</sub> < 0 | −50  |                       | mA   |
| I <sub>OK</sub>  | Output clamp current                                                                  | V <sub>O</sub> < 0 | −50  |                       | mA   |
| I <sub>O</sub>   | Continuous output current                                                             |                    | ±20  |                       | mA   |
|                  | Continuous current through V <sub>CC</sub> or GND                                     |                    | ±50  |                       | mA   |
| T <sub>J</sub>   | Junction temperature                                                                  |                    | 150  |                       | °C   |
| T <sub>stg</sub> | Storage temperature                                                                   |                    | −65  | 150                   | °C   |

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.

### 6.2 ESD Ratings

|                    |                         | VALUE                                                                          | UNIT |
|--------------------|-------------------------|--------------------------------------------------------------------------------|------|
| V <sub>(ESD)</sub> | Electrostatic discharge | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>              | 2000 |
|                    |                         | Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup> | 1000 |
|                    |                         |                                                                                | V    |

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|                 |                                | MIN                      | MAX             | UNIT |
|-----------------|--------------------------------|--------------------------|-----------------|------|
| V <sub>CC</sub> | Supply voltage                 | 0.8                      | 3.6             | V    |
| V <sub>I</sub>  | Input voltage                  | 0                        | 3.6             | V    |
| V <sub>O</sub>  | Output voltage                 | 0                        | V <sub>CC</sub> | V    |
| I <sub>OH</sub> | High-level output current      | V <sub>CC</sub> = 0.8 V  | −20             | μA   |
|                 |                                | V <sub>CC</sub> = 1.1 V  | −1.1            | mA   |
|                 |                                | V <sub>CC</sub> = 1.4 V  | −1.7            |      |
|                 |                                | V <sub>CC</sub> = 1.65   | −1.9            |      |
|                 |                                | V <sub>CC</sub> = 2.3 V  | −3.1            |      |
|                 |                                | V <sub>CC</sub> = 3 V    | −4              |      |
| I <sub>OL</sub> | Low-level output current       | V <sub>CC</sub> = 0.8 V  | 20              | μA   |
|                 |                                | V <sub>CC</sub> = 1.1 V  | 1.1             | mA   |
|                 |                                | V <sub>CC</sub> = 1.4 V  | 1.7             |      |
|                 |                                | V <sub>CC</sub> = 1.65 V | 1.9             |      |
|                 |                                | V <sub>CC</sub> = 2.3 V  | 3.1             |      |
|                 |                                | V <sub>CC</sub> = 3 V    | 4               |      |
| T <sub>A</sub>  | Operating free-air temperature | −40                      | 85              | °C   |

(1) All unused inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. See the TI application report *Implications of Slow or Floating CMOS Inputs*, [SCBA004](#).

## 6.11 Typical Characteristics

Figure 1.  $t_{pd}$  vs  $V_{CC}$ , 15-pF Load

## 7 Parameter Measurement Information

### 7.1 Propagation Delays, Setup and Hold Times, and Pulse Duration

- NOTES: A.  $C_L$  includes probe and jig capacitance.  
 B. All input pulses are supplied by generators having the following characteristics: PRR  $\leq 10$  MHz,  $Z_O = 50\ \Omega$ , slew rate  $\geq 1$  V/ns.  
 C. The outputs are measured one at a time, with one transition per measurement.  
 D.  $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{pd}$ .  
 E. All parameters and waveforms are not applicable to all devices.

**Figure 2. Load Circuit and Voltage Waveforms**

- NOTES:
- A.  $C_L$  includes probe and jig capacitance.
  - B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
  - C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq 10 \text{ MHz}$ ,  $Z_O = 50 \Omega$ , slew rate  $\geq 1 \text{ V/ns}$ .
  - D. The outputs are measured one at a time, with one transition per measurement.
  - E.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
  - F.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
  - G. All parameters and waveforms are not applicable to all devices.

**Figure 3. Load Circuit and Voltage Waveforms**

## 8 Detailed Description

### 8.1 Overview

The AUP family is TI's premier solution to the low-power needs of the industry in battery-powered portable applications. This family ensures a very low static and dynamic power consumption across the entire  $V_{CC}$  range of 0.8 V to 3.6 V, resulting in an increased battery life. This product also maintains excellent signal integrity, which produces very low undershoot and overshoot characteristics.

The SN74AUP1G57 features configurable multiple functions. The output state is determined by eight patterns of 3-bit input. The user can choose the logic functions AND, OR, NAND, NOR, XNOR, inverter, and noninverter. All inputs can be connected to  $V_{CC}$  or GND.

The device functions as an independent gate with Schmitt-trigger inputs, which allow for slow input transition and better switching noise immunity at the input.

NanoStar package technology is a major breakthrough in IC packaging concepts, using the die as the package.

This device is fully specified for partial-power-down applications using  $I_{off}$ . The  $I_{off}$  circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

### 8.2 Functional Block Diagram

### 8.3 Feature Description

This part is available in the TI NanoStar package. It has low static-power consumption with  $I_{CC} = 0.9 \mu A$  maximum and low dynamic power consumption ( $C_{pd} = 4.3$  pF, Typical at 3.3 V).

The inputs have low capacitance, with typical  $C_i = 1.5$  pF.

This part has low noise, with overshoot and undershoot less than 10% of  $V_{CC}$ .

This part supports partial-power-down mode operation. When this part is powered down ( $V_{CC} = 0$  V), the leakage current into the device is characterized by  $I_{off}$ .

Schmitt-trigger inputs provide hysteresis and consistency in  $V_{IH} / V_{IL}$ .

It has a wide operating  $V_{CC}$  range of 0.8 V to 3.6 V, and has been optimized for 3.3-V operation.

3.6-V I/O tolerant to support mixed-mode signal operation.

It has a low propagation delay of 5.3 ns at 3.3 V.

It is suitable for point-to-point applications.

### 8.4 Device Functional Modes

Table 1 lists all the functional modes of the SN74AUP1G57.

**Table 1. Function Table**

| INPUTS |     |     | OUTPUT<br>Y |
|--------|-----|-----|-------------|
| In2    | In1 | In0 |             |
| L      | L   | L   | H           |
| L      | L   | H   | L           |
| L      | H   | L   | H           |

**Table 1. Function Table (continued)**

| INPUTS |     |     | OUTPUT<br>Y |

## 9 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The SN74AUP1G57 features configurable multiple functions. The output state is determined by eight patterns of 3-bit input. The user can choose the logic functions AND, NAND, NOR, XNOR, inverter, and noninverter. All inputs can be connected to  $V_{CC}$  or GND.

This part can be used in any application where an equivalent single gate would work. The biggest benefit to this part is that it can be used for multiple functions on the same board, reducing the total number of part numbers to be used.

### 9.2 Typical Application

This application shows how the SN74AUP1G57 can be configured to work as an AND logic gate. This part can The capacitor shown is 0.1 uF and should be placed as close as possible to the part.

**Figure 9. Schematic for AND Gate Configuration of SN74AUP1G57**

#### 9.2.1 Design Requirements

This device uses CMOS technology and has balanced output drive. Take care to avoid bus contention because it can drive currents that would exceed maximum limits.

#### 9.2.2 Detailed Design Procedure

1. Recommended Input conditions
  - Rise time and fall time specs. See  $(\Delta t/\Delta V)$  in [Recommended Operating Conditions](#)
  - Specified high and low levels. See  $(V_{IH}$  and  $V_{IL})$  in [Recommended Operating Conditions](#)
  - Inputs are overvoltage tolerant allowing them to go as high as 4.6 V at any valid  $V_{CC}$
2. Recommend output conditions
  - Load currents should not exceed 20 mA on the output and 50 mA total for the part
  - Outputs should not be pulled above  $V_{CC} + 0.5$  V.

## Typical Application (continued)

### 9.2.3 Application Curve

The AUP family of single gate logic makes excellent translators for the new lower voltage microprocessors that typically are powered from 0.8 V to 1.2 V. They can drop the voltage of peripheral drivers and accessories that are still powered by 3.3 V to the new microcontroller power levels.

† Single, dual, and triple gates.

**Figure 10. AUP – The Lowest-Power Family**

## 10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the [Recommended Operating Conditions](#).

Each  $V_{CC}$  terminal should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a 0.1-µF bypass capacitor is recommended. If there are multiple pins labeled  $V_{CC}$ , then a 0.01-µF or 0.022-µF capacitor is recommended for each  $V_{CC}$  because the  $V_{CC}$  pins will be tied together internally. For devices with dual supply pins operating at different voltages, for example  $V_{CC}$  and  $V_{DD}$ , a 0.1-µF bypass capacitor is recommended for each supply pin. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise. 0.1-µF and 1-µF capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power terminal as possible for best results.

## 11 Layout

### 11.1 Layout Guidelines

Reflections and matching are closely related to the loop antenna theory but are different enough to be discussed separately from the theory. When a PCB trace turns a corner at a 90° angle, a reflection can occur. A reflection occurs primarily because of the change of width of the trace. At the apex of the turn, the trace width increases to 1.414 times the width. This increase upsets the transmission-line characteristics, especially the distributed capacitance and self-inductance of the trace which results in the reflection. Not all PCB traces can be straight and therefore some traces must turn corners. [Figure 11](#) shows progressively better techniques of rounding corners. Only the last example (BEST) maintains constant trace width and minimizes reflections.

## 11.2 Layout Example

**Figure 11. Trace Example**

## 12 Device and Documentation Support

### 12.1 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

**TI E2E™ Online Community** *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At [e2e.ti.com](http://e2e.ti.com), you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

### 12.2 Trademarks

NanoStar, E2E are trademarks of Texas Instruments.  
All other trademarks are the property of their respective owners.

### 12.3 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

- <sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- <sup>(4)</sup> There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- <sup>(5)</sup> Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- <sup>(6)</sup> Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

# EXAMPLE BOARD LAYOUT

DBV0006A

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

LAND PATTERN EXAMPLE  
EXPOSED METAL SHOWN  
SCALE:15X

SOLDER MASK DETAILS

4214840/B 03/2018

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

## EXAMPLE STENCIL DESIGN

DBV0006A

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

SOLDER PASTE EXAMPLE  
BASED ON 0.125 mm THICK STENCIL  
SCALE:15X

4214840/B 03/2018

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

## DCK (R-PDSO-G6)

## PLASTIC SMALL-OUTLINE PACKAGE

4093553-4/G 01/2007

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
  - Falls within JEDEC MO-203 variation AB.

DCK (R-PDSO-G6)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
  - D. Publication IPC-7351 is recommended for alternate designs.
  - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

DRL0006A

## PACKAGE OUTLINE

SOT - 0.6 mm max height

PLASTIC SMALL OUTLINE

4223266/A 09/2016

### NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.

# EXAMPLE BOARD LAYOUT
