R164 clock termination resistors should be placed close to KS8873. If PHY Mode MII is selected, it is recommended to change the values to 33 Ohms.

R213 clock termination resistors should be placed close to KS8873. If PHY Mode MII is selected, it is recommended to change the values to 33 Ohms.

Do not populate cap if pull down is used

Compatible Isolation Transformers
 Pulse H1102
 Transpower HB726
 Bel Fuse S558-5999-U7
 YCL PT163020
 DELTA LF8505

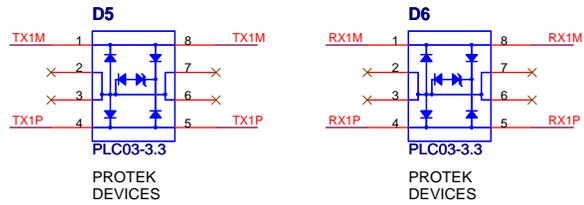

Place components in dotted box close to KS8873FLL

Route TX pairs on component side

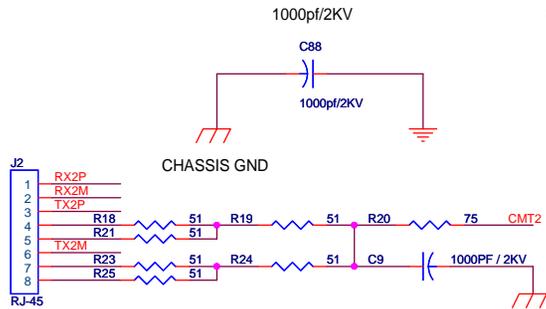

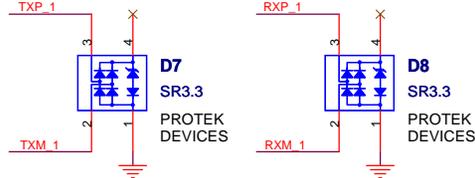

Route RX pairs on solder side

Route TX & RX differential pairs close together, 8mil/8mil parallel spacing, and keep other signals 20 mil (minimum) away

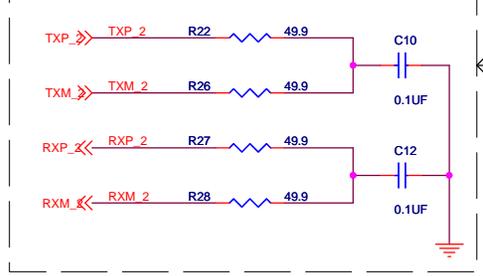

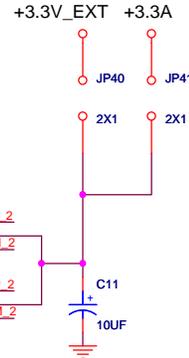

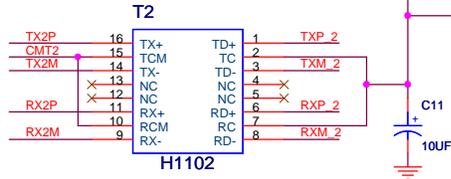

Line Side Protection (test option)
 Place near RJ-45 connector

RMII option

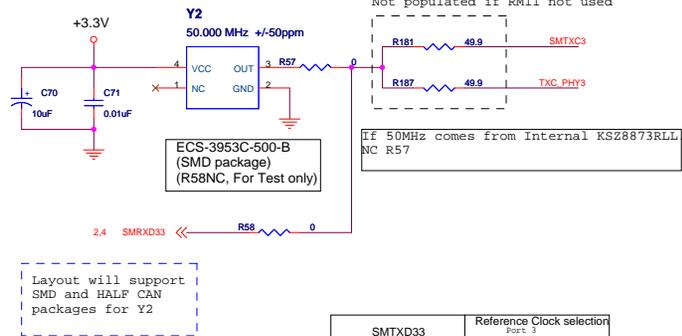

KS8873RLL provides RMII signals with respect to both PHY and MAC sides.

For this board, the KS8873RLL provides RMII signals with respect to MAC side only. The RMII signal connections between KS8873RLL and external PHY are shown in the table to the right.

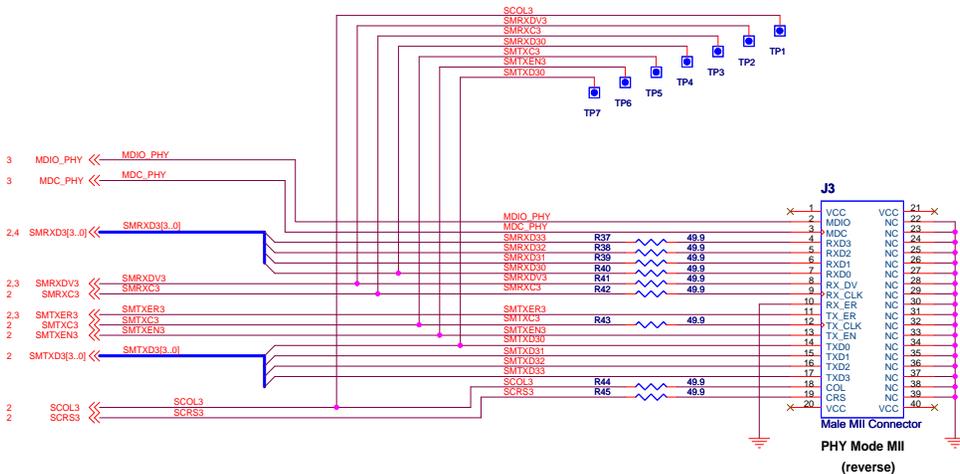

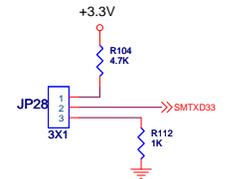

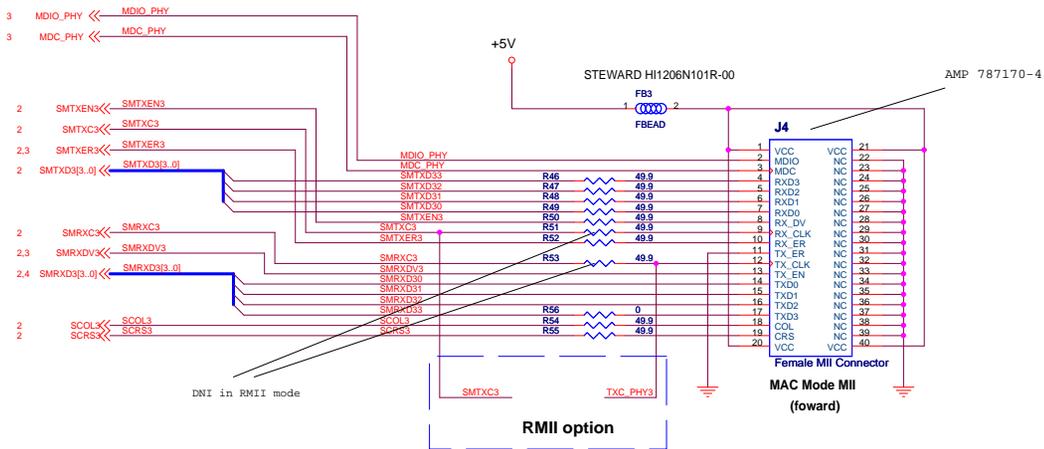

The KS8873RLL can provide the 50MHz reference clock by disconnect JP19 to enable REFCLKO. Remove R 51 and R53.

The KS8873RLL can use internal or external reference clock which is selected by register 198 bit 3. For external, it is set to 1, vice reverse.
