

SN65LBC171, SN75LBC171 TRIPLE DIFFERENTIAL TRANSCEIVERS

SLLS460A – NOVEMBER 2000 – REVISED FEBRUARY 2001

- Three Differential Transceivers in One Package
- Signaling Rates¹ Up to 30 Mbps
- Low Power and High Speed
- Designed for TIA/EIA-485, TIA/EIA-422, ISO 8482, and ANSI X3.277 (HVD SCSI Fast-20) Applications
- Common-Mode Bus Voltage Range –7 V to 12 V
- ESD Protection on Bus Terminals Exceeds 12 kV
- Driver Output Current up to ± 60 mA
- Thermal Shutdown Protection
- Driver Positive and Negative Current Limiting
- Power-Up, Power-Down Glitch-Free Operation
- Pin-Compatible With the SN75ALS171
- Available in Shrink Small-Outline Package

description

The SN65LBC171 and SN75LBC171 are monolithic integrated circuits designed for bidirectional data communication on multipoint bus-transmission lines. Potential applications include serial or parallel data transmission, cabled peripheral buses with twin axial, ribbon, or twisted-pair cabling. These devices are suitable for FAST-20 SCSI and can transmit or receive data pulses as short as 25 ns, with skew less than 3 ns.

These devices combine three 3-state differential line drivers and three differential input line receivers, all of which operate from a single 5-V power supply.

The driver differential outputs and the receiver differential inputs are connected internally to form three differential input/output (I/O) bus ports that are designed to offer minimum loading to the bus whenever the driver is disabled or $V_{CC} = 0$. These ports feature a wide common-mode voltage range making the device suitable for party-line applications over long cable runs.

The SN75LBC171 is characterized for operation over the temperature range of 0°C to 70°C. The SN65LBC171 is characterized for operation over the temperature range of –40°C to 85°C.

SN65LBC171DB (Marked as BL171)
SN75LBC171DB (Marked as LB171)
SN65LBC171DW (Marked as 65LBC171)
SN75LBC171DW (Marked as 75LBC171)

logic diagram

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

¹The signaling rate of a line is the number of voltage transitions that are made per second expressed in the units bps (bits per second).

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

SN65LBC171, SN75LBC171 TRIPLE DIFFERENTIAL TRANSCEIVERS

SLLS460A – NOVEMBER 2000 – REVISED FEBRUARY 2001

absolute maximum ratings[†]

Supply voltage, V_{CC} (see Note 1)	–0.3 V to 6 V
Voltage range at any bus I/O terminal (steady state)	–10 V to 15 V
Voltage input range, A and B, (transient pulse through 100 Ω , see Figure 12)	–30 V to 30 V
Voltage range at any DE, $\overline{RE}$, or CDE terminal	–0.5 V to $V_{CC} + 0.5$ V
Electrostatic discharge: Human body model (A, B, GND) (see Note 2)	12 kV
All pins	5 kV
Charged-device model (all pins) (see Note 3)	1 kV
Continuous total power dissipation	See Power Dissipation Rating Table
Storage temperature range, T_{stg}	–65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	260°C

[†] Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. All voltage values, except differential I/O bus voltages, are with respect to network ground terminal.
2. Tested in accordance with JEDEC Standard 22, Test Method A114–A.
3. Tested in accordance with JEDEC Standard 22, Test Method C101.

POWER DISSIPATION RATING TABLE

PACKAGE	$T_A \leq 25^\circ\text{C}$ POWER RATING	DERATING FACTOR [‡] ABOVE $T_A = 25^\circ\text{C}$	$T_A = 70^\circ\text{C}$ POWER RATING	$T_A = 85^\circ\text{C}$ POWER RATING
DB	995 mW	8.0 mW/°C	635 mW	515 mW
DW	1480 mW	11.8 mW/°C	950 mW	770 mW

[‡] This is the inverse of the junction-to-ambient thermal resistance when board-mounted and with no air flow.

recommended operating conditions

		MIN	NOM	MAX	UNIT
Supply voltage, V_{CC}		4.75	5	5.25	V
Voltage at any bus I/O terminal	A, B	–7		12	V

SLLS460A – NOVEMBER 2000 – REVISED FEBRUARY 2001

DRIVER SECTION

electrical characteristics over recommended operating conditions

PARAMETER			TEST CONDITIONS		MIN	TYP [†]	MAX	UNIT
V _{IK}	Input clamp voltage	D, DE, CDE	I _I = 18 mA		−1.5	−0.7		V
V _O	Open-circuit output voltage (single-ended)		A or B, No load		0		V _{CC}	V
V _{OD(SS)}	Steady-state differential output voltage magnitude [‡]		No load		3.8	4.3	V _{CC}	V
			R _L = 54 Ω, See Figure 1		1	1.6	2.4	V
			With common-mode loading, See Figure 2		1	1.6	2.4	V
ΔV _{OD}	Change in differential output voltage magnitude, V _{OD(H)} − V _{OD(L)}		R _L = 54 Ω, C _L = 50 pF	See Figure 1	−0.2		0.2	V
V _{OC(SS)}	Steady-state common-mode output voltage				2	2.4	2.8	V
ΔV _{OC(SS)}	Change in steady-state common-mode output voltage (V _{OC(H)} − V _{OC(L)})				−0.2		0.2	V
I _I	Input current		D, DE, CDE		−100		100	μA
I _O	Output current with power off		V _{CC} = 0 V, V _O = −7 V to 12 V		−700		900	μA
I _{OS}	Short-circuit output current		V _O = −7 V to 12 V, See Figure 7		−250		250	mA
I _{CC}	Supply current (driver enabled)		D at 0 V or V _{CC} , CDE, DE, $\overline{\text{RE}}$ at V _{CC} , No load			14	20	mA

[†] All typical values are at V_{CC} = 5 V and T_A = 25°C.

[‡] The minimum V_{OD} may not fully comply with TIA/EIA-485-A at operating temperatures below 0°C. System designers should take the possibly lower output signal into account in determining the maximum signal-transmission distance.

switching characteristics over recommended operating conditions

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t _{PLH}	Differential output propagation delay, low-to-high	R _L = 54 Ω, C _L = 50 pF, See Figure 3	4	8.5	12	ns
t _{PHL}	Differential output propagation delay, high-to-low		4	8.5	11	
t _r	Differential output rise time		3	7.5	11	
t _f	Differential output fall time		3	7.5	11	
t _{sk(p)}	Pulse skew (t _{PLH} – t _{PHL})				2	
t _{sk(o)}	Output skew [§]				1.5	
t _{sk(pp)}	Part-to-part skew [¶]				2	
t _{PLH}	Differential output propagation delay, low-to-high	See Figure 4, (HVD SCSI double-terminated load)	3	7	10	ns
t _{PHL}	Differential output propagation delay, high-to-low		3	7.5	10	
t _r	Differential output rise time		3	7.5	12	
t _f	Differential output fall time		3	7.5	12	
t _{sk(p)}	Pulse skew (t _{PLH} – t _{PHL})				3	
t _{sk(o)}	Output skew [§]				1.5	
t _{sk(pp)}	Part-to-part skew [¶]				2.5	
t _{PZH}	Output enable time to high level	See Figure 5		15	25	ns
t _{PHZ}	Output disable time from high level			18	25	
t _{PZL}	Output enable time to low level	See Figure 6		10	25	ns
t _{PLZ}	Output disable time from low level			17	25	

[§] Output skew (t_{sk(o)}) is the magnitude of the time delay difference between the outputs of a single device with all of the inputs connected together.

[¶] Part-to-part skew (t_{sk(pp)}) is the magnitude of the difference in propagation delay times between any specified terminals of two devices when both devices operate with the same input signals, the same supply voltages, at the same temperature, and have identical packages and test circuits.

RECEIVER SECTION

electrical characteristics over recommended operating conditions

PARAMETER		TEST CONDITIONS		MIN	TYP [†]	MAX	UNIT
V _{IT+}	Positive-going differential input voltage threshold				0.2		V
V _{IT-}	Negative-going differential input voltage threshold			-0.2			
V _{hys}	Hysteresis voltage (V _{IT+} - V _{IT-})				40		mV
V _{OH}	High-level output voltage	V _{ID} = 200 mV, I _{OH} = -8 mA, see Figure 10		4	4.7	V _{CC}	V
V _{OL}	Low-level output voltage	V _{ID} = -200 mV, I _{OL} = -8 mA, see Figure 10		0	0.2	0.4	
I _I	Line input current	Other input = 0 V	V _I = 12 V			0.9	mA
			V _I = -7 V	-0.7			
I _I	Input current	$\overline{\text{RE}}$		-100		100	μA
R _I	Input resistance	A, B		12			k Ω
I _{CC}	Supply current (receiver enabled)	A, B, D open, $\overline{\text{RE}}$, DE, and CDE at 0 V				16	mA

[†] All typical values are at V_{CC} = 5 V and T_A = 25°C.

switching characteristics over recommended operating conditions

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
t _{PLH}	Propagation delay time, low-to-high level output	V _{ID} = -3 V to 3 V, See Figure 9		7		16	ns
t _{PHL}	Propagation delay time, high-to-low level output			7		16	ns
t _r	Receiver output rise time				1.3	3	ns
t _f	Receiver output fall time				1.3	3	ns
t _{PZH}	Receiver output enable time to high level	See Figure 10			26	40	ns
t _{PHZ}	Receiver output disable time from high level					40	
t _{PZL}	Receiver output enable time to low level	See Figure 11			29	40	ns
t _{PLZ}	Receiver output enable time to high level					40	
t _{sk(p)}	Pulse skew (t _{PLH} - t _{PHL})					2	ns
t _{sk(o)}	Output skew [‡]					1.5	ns
t _{sk(pp)}	Part-to-part skew [§]					3	ns

[‡] Output skew (t_{sk(o)}) is the magnitude of the time delay difference between the outputs of a single device with all of the inputs connected together.

[§] Part-to-part skew (t_{sk(pp)}) is the magnitude of the difference in propagation delay times between any specified terminals of two devices when both devices operate with the same input signals, the same supply voltages, at the same temperature, and have identical packages and test circuits.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
