Functional Diagram**General Description**

The HMC216MS8 & HMC216MS8E are ultra miniature double-balanced FET mixers in 8 lead plastic surface mount packages (MSOP). This MMIC mixer is constructed of switched GaAs FETs and novel planar transformer baluns on the chip. In addition to an LO drive of +3 to +13 dBm, a gate voltage of $V_{gg} = -0.9$ to -1.6 Vdc is required. The device can be used as an upconverter or downconverter for 1900 or 2400 MHz applications. The consistent MMIC performance will improve system operation and assure regulatory compliance.

Electrical Specifications, $T_A = +25^\circ\text{C}$, As a Function of LO Drive, $V_{gg} = -1.2\text{ Vdc}$

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
