FEATURES

- **Max. shift frequency of 700MHz**
- **Clock to Q delay max. of 1100ps**
- **S_n to $\overline{TC}$ speed improved by 50%**
- **S_n set-up and hold time reduced by more than 50%**
- **I_{EE} min. of –170mA**
- **Industry standard 100K ECL levels**
- **Internal 75KΩ input pull-down resistors**
- **Extended supply voltage option: V_{EE} = –4.2V to –5.5V**
- **Voltage and temperature compensation for improved noise immunity**
- **50% faster than Fairchild 300K at lower power**
- **Function and pinout compatible with Fairchild F100K**
- **Available in 24-pin CERPACK and 28-pin PLCC packages**

PIN NAMES

Pin	Function
CP	Clock Pulse Input
$\overline{CEP}$	Count Enable Parallel Input (Active LOW)
$D_0/\overline{CET}$	Serial Data Input/Count Enable Trickle Input (Active LOW)
S_0 — S_2	Select Inputs
MR	Master Reset Input
V_{EES}	V_{EE} Substrate
V_{CCA}	V_{CCO} for ECL Outputs
P_0 – P_3	Preset Inputs
D_3	Serial Data Input
$\overline{TC}$	Terminal Count Output
Q_0 — Q_3	Data Outputs
$\overline{Q}_0$ — $\overline{Q}_3$	Complementary Data Outputs

DESCRIPTION

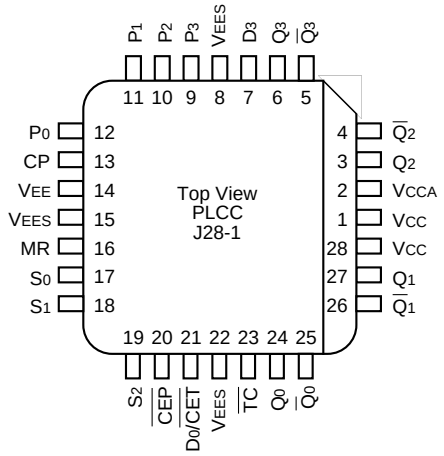
The SY100S336A is functionally the same as the SY100S336, but has S_n to $\overline{TC}$ speed and Sn set-up and hold times significantly improved, allowing for higher clock frequency when used as a cascaded multi-stage counter.

The SY100S336A functions either as a modulo-16 up/down counter or as a 4-bit bidirectional shift register and is designed for use in high-performance ECL systems. Three Select inputs (Sn) are provided for determining the mode of operation. The Function Table lists the available modes of operation. In order to allow cascading for multistage counters, two Count Enable controls ($\overline{CEP}$, $\overline{CET}$) are provided. The $\overline{CET}$ input also functions as the Serial Data input (S_0) for a shift-up operation, while the D_3 input serves as the Serial Data input for the shift-down operation.

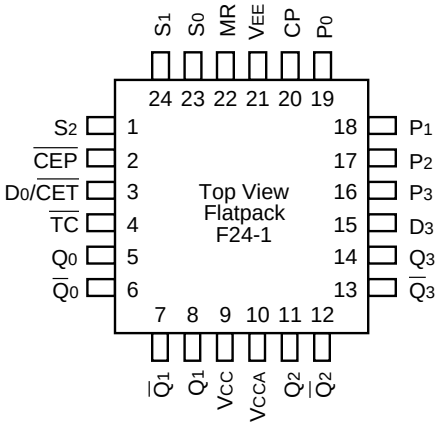
When the device is in the counting mode, the Terminal Count ($\overline{TC}$) goes to a logical LOW when the count reaches 15 for count-up or reaches 0 for count-down. When in the shift mode, the $\overline{TC}$ output simply repeats the Q_3 output.

The flexiblity provided by the $\overline{TC}/Q_3$ output and the $D_0/\overline{CET}$ input allows these signals to be interconnected from one stage to the next higher stage for multistage counting or shift-up operations. The individual Presets (P_n) allow initialization of the counter by entering data in parallel to preset the counter. A logic HIGH on the Master Reset (MR) overrides all other inputs and asynchronously clears the flip-flops. An additional synchronous Clear is provided, as well as a complement function which synchronously inverts the contents of the flip-flops. All inputs have 75KΩ pull-down resistors.

PACKAGE/ORDERING INFORMATION



28-Pin PLCC (J28-1)



24-Pin Cerpack (F24-1)

Ordering Information

Part Number	Package Type	Operating Range	Package Marking	Lead Finish
SY100S336AFC	F24-1	Commercial	SY100S336AFC	Sn-Pb
SY100S336AFCTR(1)	F24-1	Commercial	SY100S336AFC	Sn-Pb
SY100S336AJC	J28-1	Commercial	SY100S336AJC	Sn-Pb
SY100S336AJCTR(1)	J28-1	Commercial	SY100S336AJC	Sn-Pb
SY100S336AJZ(2)	J28-1	Commercial	SY100S336AJZ with Pb-Free bar-line indicator	Matte-Sn
SY100S336AJZTR(1, 2)	J28-1	Commercial	SY100S336AJZ with Pb-Free bar-line indicator	Matte-Sn

Notes:

1. Tape and Reel.
2. Pb-Free package is recommended for new designs.

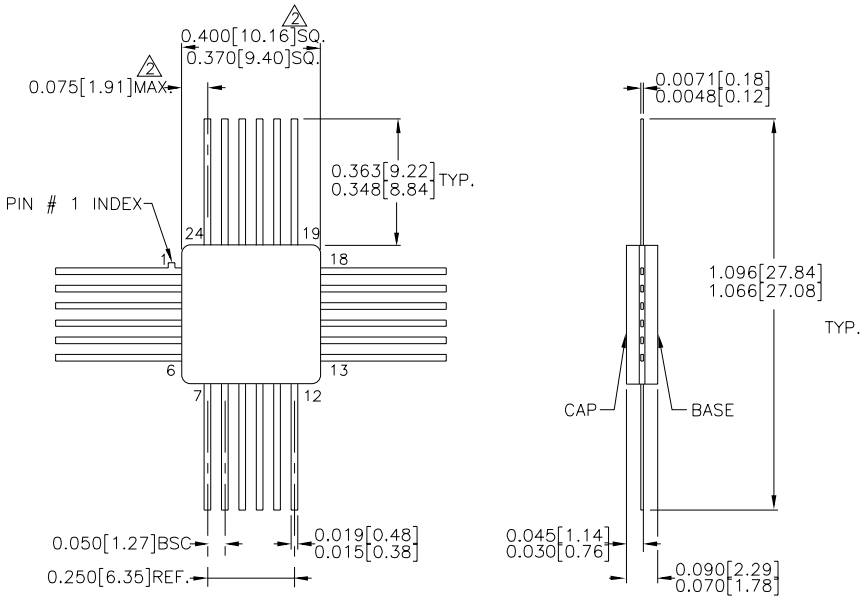
Set-up and Hold Time

Notes:

1. V_{EE} = –4.2V to –5.5V unless otherwise specified, V_{CC} = V_{CCA} = GND.
2. t_S is the minimum time before the transition of the clock that information must be present at the data input.
3. t_H is the minimum time after the transition of the clock that information must remain unchanged at the data input.

24-PIN CERPACK (F24-1)



NOTES:
1. DIMENSIONS ARE IN INCHES[MM].
2. THIS DIMENSION INCLUDES GLASS PROTRUSION AND CAP TO BASE ALIGNMENT TOLERANCES.
3. DIMENSIONS SHOWN ARE MAX/MIN, WHERE NOTED.
