Description

This evaluation kit demonstrates the use of the USB full-speed microcontroller ST72651 as a bridge between the USB and the RS232 interface, providing an additional serial port on computers equipped with USB. In addition, this evaluation kit demonstrates a simple method for connecting the USB microcontroller ST72651 to the PC without need of a proprietary driver. Several general-purpose input/output pins of the ST72651 are provided on the external connector, thus providing a way to connect additional circuitry and allow customized USB applications. The evaluation board can be reprogrammed easily with a user code through the in-circuit communication (ICC) connector
